

ANANT BISHT

[Github](#) | [Linkedin](#) | ianantbisht@gmail.com | +91 9910774419

SKILLS

Programming Languages: Python, Javascript, Typescript

AI & LLM System: RAG, LangChain, LangGraph, GraphRAG, UltraRAG, LlamaIndex, MCP, Prompt Engineering & Tool Calling, Autonomous Agent

Web Dev: React.js, Node.js, Express.js, FastAPI, Redis, Kafka

Databases: MongoDB, MySQL, Supabase, GraphDB, Vector DB

AI Tools: ChatGPT, ClaudeCode, Copilot Gemini, Antigravity, Cursor, HuggingFace, Groq, Ollama

Automation & Integrations: n8n, make.com, Zapier, 11LABS, MiniMax

Version control: Git, Github

Cloud: AWS(EC2, S3, Elastic Cache), GCP, Docker

PROFESSIONAL EXPERIENCE

1to10X – Associate AI Engineer

MAY'25 – Present

- Developed and lead end-to-end RAG pipelines, including data ingestion, embeddings, retrieval logic, and response generation.
- Built and maintained Graph-based RAG solutions by organizing data as entities and relationships for improved retrieval accuracy.
- Developed AI agents using LangChain and LangGraph to support autonomous task execution.
- Coordinated RAG and agent development work within the team, ensuring pipeline stability and consistent output quality.
- Implemented internal AI automation workflows using low-code tools such as n8n, automating data flows, triggers, and operational processes.
- Built business and operational automations integrated with Zoho to reduce manual effort and improve internal efficiency.
- Supported testing, monitoring, and optimization of AI pipelines and automations to ensure reliability in day-to-day internal usage.

Robot Wallah – AI Developer

SEP'24 – APRIL'25

- Developed and deployed AI agents using LangChain and LangGraph for automation and decision workflows.
- Optimized database and retrieval performance across MongoDB and Pinecone, improving response time by 50%.
- Implemented knowledge graph-based retrieval using Neo4j to enhance contextual understanding and multi-hop queries.
- Designed and maintained RESTful APIs using Node.js and Express.js to support AI services.

Webjini Technologies – Full Stack Developer

MAR'24 – SEP'24

- Revamped an Ed-Tech platform by integrating interactive course catalogs, secure user authentication, and seamless payment processing, resulting in 100+ successful transactions in the first month.
- Developed an Admin Dashboard, optimizing user and course management efficiency by 40%.
- Enhanced cross-browser compatibility, increasing weekly active users to 1,000+ and improving the user experience rating to 4.8/5.

Cloud & Infrastructure

- Deployed AI backend services on AWS EC2 (Ubuntu Linux).
- Used AWS S3 for storing AI-generated outputs, logs, and workflow artifacts.
- Configured Nginx as a reverse proxy for API services and webhook endpoints.
- Managed environment variables and secrets for LLM APIs and OAuth credentials.
- Worked with public/private IPs, ports, and security groups for controlled access.

PROJECTS

Circle MCP

[GITHUB](#)

Tech Stack: MCP, Typescript, OpenAI, ZOD Auth, Circle.so Admin API, AWS

- Built a production-grade MCP server enabling AI assistants (Claude, VS Code Cline) to securely interact with Circle.so communities.
- Implemented Google OAuth 2.0, JWT authentication, rate limiting, and retry logic.
- Designed a modular API architecture supporting 20+ AI tools for community operations.
- Deployed and integrated the MCP server with AI clients for real-time automated actions.

Mystery Message - Full Stack Anonymous Messaging App

[LINK](#) | [GITHUB](#)

Tech Stack: Nextjs, Typescript, React.js, Auth.js, Tailwind CSS, Shadcn UI

- Built a Full-stack anonymous messaging application with over 60+ active users using Next.js for a fast and scalable frontend, implementing comprehensive CRUD operations with RESTful API design.
 - Prepared authentication with Zod & Auth.js, reducing invalid logins by 30% and response time by 40%.
 - Constructed OTP signup, boosting completion rates by 25% and cutting duplicate accounts by 35%.
 - Optimized MongoDB queries, improving execution time by 50% using MongoDB pipeline.
 - Implemented and validated forms using React Hook Form with debouncing for better user experience.
- Enhanced application performance through optimization techniques, improving speed and scalability. Also, reduced load time by 40% and boosted overall performance.

Career Pilot - Full Stack Job Portal Web App

[LINK](#) | [GITHUB](#)

Tech Stack: MongoDB, Express, React.js, Node.js, Tailwind CSS, Shadcn UI, Framer Motion

- Developed a job portal with role-based authentication, reducing unauthorized access by 40% and improving security.
- Prepared a sleek and responsive design with React and Tailwind CSS for optimal performance, enhancing user engagement by 30%.
- Built the backend with Node.js, Express, and MongoDB, optimizing database queries to improve load times by 50%.

EDUCATION

IMS Ghaziabad

2021– 2024

Bachelor of Computer Application (BCA); CGPA: 7.5

CERTIFICATIONS

Certification of completion in Frontend Web Development by **Google**

Certification of completion in Frontend Web Development by **Microsoft**
