

ABHISHEK MASSEY

Security Analyst

Highly skilled and certified Penetration Tester with comprehensive VAPT experience across web, mobile, and network infrastructure, seeking a Security Analyst role to leverage expertise in threat analysis, vulnerability management, and incident response, to enhance organizational security posture within the Information Technology sector. Aim to deliver actionable remediation strategies and contribute to proactive risk mitigation.

Mobile: +917838960374

E-mail: abhishekms559@gmail.com

Address: Patparganj, India

PROFESSIONAL SUMMARY

- & Experienced Security Analyst and Penetration Tester specializing in vulnerability assessment, penetration testing, and security auditing across diverse IT environments.
- & Proficient in utilizing industry-standard tools such as Burp Suite, MobSF, Frida, and Wireshark for comprehensive security evaluations.
- & Expertise in identifying and remediating critical vulnerabilities including SQL Injection, XSS, and API-related flaws, ensuring robust application security.
- & Proven ability to conduct Android APK reverse engineering and malware analysis using static and dynamic testing methodologies.
- & Dedicated to developing detailed vulnerability assessment reports, CERT-In compliant security audit documentation, and actionable remediation recommendations.
- & Skilled in aligning security assessments with industry best practices, including OWASP Top 10, NIST, and SANS frameworks.
- & Excel in collaborating with development and infrastructure teams to validate fixes and strengthen overall security posture.
- & Experienced in authoring executive-level reports, incorporating Proof of Concept (PoC) demonstrations, CVSS scoring, and actionable mitigation strategies.
- & Comprehensive experience in Vulnerability Management, Threat Analysis, Incident Response, and Risk Assessment.
- & Certified Ethical Hacker (CEH), Certified AppSec Practitioner (CAP), and Certified Network Security Practitioner (CNSP) demonstrating commitment to professional development.

SKILLS

Technical Skills: VAPT, Burp Suite, MobSF, Frida, Wireshark, SQL Injection, XSS, APK Reverse Engineering, Malware Analysis, Network Security

Soft Skills: Communication, Problem-solving, Collaboration, Reporting

Core Competencies: Security Assessment, Penetration Testing, Vulnerability Analysis, Compliance Management, Remediation Planning

WORK EXPERIENCE

Security Analyst (Aug 2025 - Present)

Stago Software Pvt Ltd

Responsible for performing comprehensive security assessments, conducting VAPT, performing Android mobile application security testing, spearheading API security testing protocols for a variety of government and enterprise clients.

- & Orchestrated comprehensive security assessments encompassing web applications, mobile applications, APIs, and network infrastructure across diverse government and enterprise environments.
- & Directed Web Application and Network VAPT initiatives to proactively identify and address critical vulnerabilities related to authentication, authorization, business logic, misconfigurations, and exposed services.
- & Executed in-depth Android mobile application security testing utilizing both static and dynamic analysis techniques to uncover insecure data storage practices, weak cryptographic implementations, and potential API-related flaws.
- & Spearheaded API security testing protocols to detect and remediate broken object level authorization, improper authentication mechanisms, excessive data exposure vulnerabilities, and rate-limiting inefficiencies.
- & Authored meticulous vulnerability assessment reports, CERT-In compliant security audit documentation, and comprehensive compliance management reports incorporating clear risk analysis and actionable remediation recommendations.

Achievements:

- & Enhanced overall client security posture by delivering detailed, actionable remediation plans based on comprehensive VAPT assessments.
- & Improved collaboration and communication between security and development teams by creating well-structured, easily understandable reports and documentation.

Security Analyst (Aug 2023 - Aug 2025)

CRAW Cyber Security

Responsible for conducting vulnerability assessments and penetration testing, performing Android APK reverse engineering and malware analysis, and developing remediation reports.

- & Executed comprehensive vulnerability assessments and penetration testing on a wide array of systems and applications to identify potential security weaknesses.
- & Performed Android APK reverse engineering using MobSF, Frida, Genymotion, and Apktool to uncover security flaws within mobile applications.
- & Identified and documented critical security vulnerabilities, including hardcoded secrets, insecure data storage practices, and API abuses, enabling prompt remediation.

- & Conducted in-depth malware analysis and dynamic/static testing procedures for Android applications to mitigate potential security risks and ensure application integrity.
- & Developed and delivered detailed remediation reports, providing actionable recommendations and guidance to development teams for effective vulnerability resolution.

Achievements:

- & Successfully identified and reported critical security vulnerabilities, resulting in proactive mitigation and enhanced security posture for client systems.
- & Provided actionable insights through comprehensive remediation reports, enabling development teams to effectively address and resolve identified security flaws.

VAPT Tester (Jan 2022 - Jan 2023)

RBS India Corp Pvt Ltd

Responsible for conducting VAPT for web and mobile apps, adhering to security standards, conducting reverse engineering of APKs and providing actions to mitigate identified risks.

- & Orchestrated full-scope Vulnerability Assessment and Penetration Testing (VAPT) initiatives for web and mobile applications, ensuring comprehensive security coverage across all platforms.
- & Employed Burp Suite, ZAP, and MobSF to rigorously identify, assess, and document security vulnerabilities, facilitating prompt and effective remediation efforts.
- & Aligned security assessments with industry best practices and regulatory compliance standards, adhering to OWASP Top 10, NIST, and SANS frameworks to maintain robust security protocols.
- & Conducted reverse engineering of APKs to meticulously analyze backend APIs, identifying potential weaknesses and mitigating risks associated with mobile application security.
- & Authored comprehensive executive-level reports, incorporating Proof of Concept (PoC) demonstrations, CVSS scoring metrics, and actionable mitigation strategies for senior management and stakeholders.

Achievements:

- & Enhanced application and data security by delivering actionable remediation plans based on thorough VAPT assessments.
- & Improved stakeholder understanding of security risks by providing clear, executive-level reports, facilitating informed security investments and decision-making.

CERTIFICATIONS

- & **EJPT** ()
Internet Network Expert
- & **CEH - CERTIFIED ETHICAL HACKER** ()
EC-COUNCIL
- & **CAP - CERTIFIED APPSEC PRACTITIONER** ()
THE SECOPS GROUP
- & **CNSP - CERTIFIED NETWORK SECURITY PRACTITIONER** ()
THE SECOPS GROUP

EDUCATION

Bachelor of Computer Applications (BCA) (2019 - 2021) NorthEast
Frontier Technical University

10th & 12th Standard (2015 - 2018) Shanghai
International University

ACHIEVEMENTS

- & Enhanced organizational security posture through proactive identification and mitigation of critical vulnerabilities, demonstrating a significant impact on risk reduction.
- & Improved application security by providing clear and concise remediation strategies to development teams, leading to more secure and resilient applications.
- & Enhanced application security by delivering actionable remediation plans based on thorough VAPT assessments, ensuring vulnerabilities are addressed effectively.
- & Improved stakeholder understanding of security risks by providing clear, executive-level reports, facilitating informed decision-making and resource allocation.

PROJECTS

Comprehensive VAPT for a Leading Trading Platform

- & Spearheaded comprehensive vulnerability assessments and penetration testing initiatives to identify critical security weaknesses within a leading trading platform.
- & Engineered and implemented targeted penetration testing strategies to rigorously evaluate and fortify the overall system resilience against potential cyber threats.
- & Conducted in-depth analysis and meticulous reporting of all identified vulnerabilities, furnishing actionable and high-impact recommendations designed for effective remediation.
- & Instrumental in significantly enhancing the overall security posture of the trading platform, ensuring a more secure and robust environment for

financial transactions.

- & Performed detailed web penetration testing to identify critical vulnerabilities within a shopping platform's infrastructure.
- & Developed and implemented structured VAPT reports, emphasizing clarity and conciseness for effective communication of findings.
- & Delivered comprehensive reports incorporating executive summaries, technical findings, detailed risk assessments, and actionable remediation strategies.
- & Significantly strengthened platform security by providing well-structured and insightful vulnerability reports, enabling swift and effective mitigation measures.

Mobile Malware Analysis of a Suspicious APK

- & Executed a meticulous malware analysis of a suspicious APK file to proactively identify and categorize potential security threats.
- & Employed both static and dynamic analysis methodologies to dissect the APK's architecture, providing a comprehensive assessment of its functionalities and capabilities.
- & Uncovered and documented malicious code segments, unauthorized access attempts, and potential data exfiltration risks existing within the application.
- & Delivered a comprehensive threat intelligence report detailing the malware's behavior, potential impact, and meticulously recommended mitigation strategies designed for rapid deployment.

Vulnerability Scanning on a Blogging Application

- & Conducted vulnerability scans to pinpoint security defects within a blogging platform.
- & Exposed critical issues, including flawed access control mechanisms and unvalidated redirection pathways potentially leading to exploitation.
- & Meticulously documented identified vulnerabilities and proposed robust remediation roadmaps for augmenting overall application resilience.

Server Misconfiguration Detection

- & Orchestrated thorough server scans leveraging Nikto and Acunetix to detect prevalent misconfigurations.
- & Identified critical server misconfigurations, encompassing outdated application versions and insecure configuration parameters.
- & Disseminated detailed intelligence reports elucidating detected misconfigurations while concurrently recommending prioritized remediation tactics.
- & Bolstered overall server hardening by recognizing and mitigating potential vulnerabilities, leading to an improved defense posture and reduced threat surface.
