 - **[12th]** U.P Board : 70%
 - **[B.C.A]** Subharti University , Meerut : 68%
-

Project #1:-

- **Project Name** : **RTA**
- **Duration** : **From Aug 2024 – Present**
- **Testing Environment** : **Cucumber Automation Framework**
- **Role** : **QA Engineer**

Project Summary: RTA Forward is an integrated transit-user platform for the New Orleans Regional Transit Authority. It provides live transit information (bus, streetcar, ferry), trip planning, system overview, alerts, and route schedules.

Responsibilities :

- Involved in analyzing the requirements and communicating with the BA team.
- Identified test cases to automate , prioritized suitable candidates for automation and automated test cases using Selenium WebDriver , Cucumber Framework and java.
- Developed the Automation framework using selenium and perform the Regression testing and Smoke Testing.
- Take the Daily Basis Push on the Git which branch I have worked on it.
- Execute the test Script on GitHub server and Analyze the Passed and Failed Test Cases Report.
- Identified End to End Test Scenarios, Test Cases, and Test Data.
- Writing effective and optimized Test Cases using Black Box Testing techniques.
- Performing Integration and regression testing.
- Involved in Bugs Tracking & Prepare Bug Report Document.
- Perform **UAT Testing**.

Project #2:-

- **Project Name** : **AccuStore Website and Mobile**
- **Duration** : **Jan 2023 – June 2025**
- **Testing Environment** : **Cucumber Automation Framework**
- **Role** : **QA Engineer**

Project Summary: It is a GSP Company, is the result of more than 40 years of helping retailers gain store-level intelligence to enhance operations, marketing, facilities management, loss prevention, and human resources. Its enhanced store profiling technology makes it easy for consumer- facing businesses to access real-time information about every site.

Responsibilities :

- Involved in analyzing the requirements and communicating with the BA team.
- Identified test cases to automate , prioritized suitable candidates for automation and automated test cases using Selenium WebDriver , Cucumber Framework and java.
- Developed the Automation framework using selenium and perform the Regression testing and Smoke Testing.
- Take the Daily Basis Push on the Git which branch I have worked on it.
- Execute the test Script on GitHub server and Analyze the Passed and Failed Test Cases Report.
- Identified End to End Test Scenarios, Test Cases, and Test Data.

Project #3:-

- **Project Name** : **Zenesys AI Chat Bot**
- **Duration** : **June-2024–Present**
- **Role** : **QA Engineer**

Project Summary: Zenesys AI Chat Bot is an intelligent conversational assistant built using advanced Artificial Intelligence and Natural Language Processing (NLP). It enables users to interact through **text chat** as well as **voice input/output**, providing a natural and human-like communication experience.

Responsibilities :

- Identified and documented end-to-end test scenarios, detailed test cases, and required test data based on project requirements.
- Designed and executed manual test cases using Black Box Testing techniques to validate application functionality.
- Performed different types of testing including functional, integration, regression, and smoke testing across web and mobile platforms.
- Logged, tracked, and verified defects using a bug-tracking tool; prepared detailed bug reports and coordinated with developers to ensure timely resolution.
- Conducted test execution for each build and analyzed results to ensure application stability.
- Participated in daily stand-up meetings and communicated testing progress, issues, and risks to the team.
- Assisted in preparing test summary reports and maintained documentation for all testing activities

Project #4:-

- **Project Name** : **DefiniteSeo**
- **Duration** : **Aug-2022–Dec-2023**
- **Role** : **QA Engineer**

Project Summary: Definite SEO is a WordPress plugin designed to optimize websites for search engines. It provides features such as on-page SEO analysis, keyword suggestions, meta tag management, sitemap generation, and content readability scoring. The plugin assists website owners and content creators in improving their search engine rankings by implementing SEO best practices.

Responsibilities :

- Analyzed project requirements and collaborated closely with the Business Analyst (BA) team to ensure complete understanding of the functionality.
- Identified and documented end-to-end test scenarios, detailed test cases, and required test data based on project requirements.
- Designed and executed manual test cases using Black Box Testing techniques to validate application functionality.
- Performed different types of testing including functional, integration, regression, and smoke testing across web and mobile platforms.
- Logged, tracked, and verified defects using a bug-tracking tool; prepared detailed bug reports and coordinated with developers to ensure timely resolution.
- Conducted test execution for each build and analyzed results to ensure application stability.
- Participated in daily stand-up meetings and communicated testing progress, issues, and risks to the team.
- Assisted in preparing test summary reports and maintained documentation for all testing activities

Project #5:-

- **Project Name** : Clinikk
- **Duration** : Feb 2022 –Aug-2022
- **Role** : QA Engineer

Project Summary: Clinikk is a healthcare platform offering modern primary care access through “Health Hubs” and digital services. Their approach emphasizes fast, convenient, and affordable healthcare, supplemented with health insurance coverage.

Responsibilities :

- Analyzed project requirements and collaborated closely with the Business Analyst (BA) team to ensure complete understanding of the functionality.
- Identified and documented end-to-end test scenarios, detailed test cases, and required test data based on project requirements.
- Designed and executed manual test cases using Black Box Testing techniques to validate application functionality.
- Performed different types of testing including functional, integration, regression, and smoke testing across web and mobile platforms.
- Logged, tracked, and verified defects using a bug-tracking tool; prepared detailed bug reports and coordinated with developers to ensure timely resolution.
- Perform **UAT Testing**.
- Participated in daily stand-up meetings and communicated testing progress, issues, and risks to the team.

Project #6:-

- **Project Name** : **Imarticus learning**
- **Duration** : **Dec 2019 –Feb-2022**
- **Role** : **QA Engineer**

Project Summary: A leading future tech-based professional education brand, dedicated to shaping the workforce of the future through cutting-edge new-age programs in Data Science & Analytics, AI, Machine Learning, FinTech, Investment Banking, Finance, Marketing, and much more.

Responsibilities :

- Analyzed project requirements and collaborated closely with the Business Analyst (BA) team to ensure complete understanding of the functionality.
- Identified and documented end-to-end test scenarios, detailed test cases, and required test data based on project requirements.
- Designed and executed manual test cases using Black Box Testing techniques to validate application functionality.
- Performed different types of testing including functional, integration, regression, and smoke testing across web and mobile platforms.
- Logged, tracked, and verified defects using a bug-tracking tool; prepared detailed bug reports and coordinated with developers to ensure timely resolution.
- Conducted test execution for each build and analyzed results to ensure application stability.
- Participated in daily stand-up meetings and communicated testing progress, issues, and risks to the team.
- Assisted in preparing test summary reports and maintained documentation for all testing activities.
- Perform **UAT Testing**.

Project #7:-

- **Project Name** : **Akbar Travels India Pvt. Ltd.**
- **Duration** : **Dec 2019 –Feb-2022**
- **Role** : **QA Engineer**

Project Summary: The project involved testing a comprehensive travel booking platform that allowed customers to search, compare, and book flights, hotels, holiday packages, and bus/train tickets. The application supported online payments, loyalty programs, and third-party integrations (such as payment gateways and airline APIs).

Responsibilities :

- Analyzed project requirements and collaborated closely with the Business Analyst (BA) team to ensure complete understanding of the functionality.
- Identified and documented end-to-end test scenarios, detailed test cases, and required test data based on project requirements.
- Designed and executed manual test cases using Black Box Testing techniques to validate application functionality.
- Performed different types of testing including functional, integration, regression, and smoke testing across web and mobile platforms.
- Logged, tracked, and verified defects using a bug-tracking tool; prepared detailed bug reports and coordinated with developers to ensure timely resolution.
- Conducted test execution for each build and analyzed results to ensure application stability.
- Participated in daily stand-up meetings and communicated testing progress, issues, and risks to the team.

- Assisted in preparing test summary reports and maintained documentation for all testing activities.

Project #8:-

- **Project Name** : **Timble Paperless Attendance application**
- **Duration** : **Dec 2018 –Dec-2019**
- **Role** : **QA Engineer**

Project Summary: The Timble Paperless Attendance system is an end-to-end wireless attendance solution designed for educational institutions and workplaces to replace manual, paper-based tracking methods. Using a combination of custom hardware (Bluetooth Low Energy beacons) and software (mobile and web applications), the system automates and secures the attendance process

Responsibilities :

- Analyzed project requirements and collaborated closely with the Business Analyst (BA) team to ensure complete understanding of the functionality.
- Identified and documented end-to-end test scenarios, detailed test cases, and required test data based on project requirements.
- Designed and executed manual test cases using Black Box Testing techniques to validate application functionality.
- Performed different types of testing including functional, integration, regression, and smoke testing across web and mobile platforms.
- Logged, tracked, and verified defects using a bug-tracking tool; prepared detailed bug reports and coordinated with developers to ensure timely resolution.
- Conducted test execution for each build and analyzed results to ensure application stability.
- Participated in daily stand-up meetings and communicated testing progress, issues, and risks to the team.
- Assisted in preparing test summary reports and maintained documentation for all testing activities.
- Perform **UAT Testing**.
