PROFESSIONAL SUMMARY

GenAI & Agentic AI Solution Architect with 11+ years of experience designing and delivering enterprise-grade intelligent automation and GenAI-driven architectures across BFSI and large-scale enterprise environments. Proven track record of delivering **100+ production-scale automations and AI solutions, achieving 500+ FTE hours saved, 90%+ error reduction, and sustained business ROI** through scalable, governed platforms.

Certified in Generative AI and Agentic Automation, with deep hands-on expertise in architecting LLM-driven agentic systems, including stateful autonomous agents, conversational GenAI assistants, multi-agent orchestration, and RAG-based knowledge grounding. Experienced in integrating agentic systems with enterprise APIs, orchestration platforms, and operational workflows, while ensuring production resiliency, observability, and control.

Strong focus on Responsible AI, model governance, trust, and compliance, enabling audit-ready, enterprise-safe GenAI adoption. Highly skilled in solution architecture, GenAI governance, enterprise integrations, and stakeholder engagement, with a demonstrated ability to lead cross-functional teams and guide organizations from **POC to production-scale GenAI and Agentic AI platforms**.

CORE COMPETENCIES & TECHNICAL SKILLS

Agent Platforms	LangGraph, LangChain, LangSmith, Google ADK, Vertex AI Agent Builder, UiPath Agents, Maestro, Autopilot
Generative & Agentic AI Core Skill Stack	Foundation LLMs (GPT-4/4o, Claude, Gemini), Retrieval-Augmented Generation (RAG), MCP Server, A2A protocol, Python & FastAPI based AI services, Enterprise API integration, Vector Databases, Human-in-the-Loop (HITL) orchestration, Document Understanding, Communication Mining, AI Trust & Safety layer, Agent guardrails, Responsible AI & Model Governance, AI-driven insights, AI-enabled observability, AgentOps, and MLOps
Automation & Execution Layer	AI-assisted automation platforms including UiPath, Automation Anywhere, Microsoft Power Automate; GenAI-driven automations, IXP, process mining & task mining
Integration Capabilities	SAP, Salesforce, ServiceNow, Jira, SharePoint, Office 365, Dynamics, Postman, Mulesoft, Integration Services, UiPath Apps, Power Apps, GCS, BigQuery
DevOps & Cloud	Azure, Google Cloud Platform (GCP), GitHub, GitLab, Azure DevOps, CI/CD pipelines for AI & agent platforms, Docker, cloud-native GenAI architectures, automation & orchestration platform engineering
Domain Expertise	BFSI, Shared Services, Supply Chain, Education, Healthcare, Audit & Compliance, Telecom, HR & Payroll, IT Ops
Leadership & Delivery	Solution Design, Effort Estimation, Architecture Governance, Performance Optimization, Security & Risk Controls, Training & Mentoring, SDDs, PDDs, TDDs, FRQs, UAT Test Cases
Pre-Sales & Consulting	Solution Strategy & Transformation Roadmaps, RFP/RFI/RFQ Response Leadership, Customer Workshops, Discovery & Demos, Estimation Models, Pricing, Commercial Structuring

WORK HISTORY

Solution Architect	Yash Technologies, Pune	Oct 2022 – Present
Lead Developer	Nihilent Ltd, Pune	Jan 2020 – Oct 2022
Technology Analyst	Infosys, Pune	Feb 2018 – Dec 2019
Software Engineer	L&T Infotech, Mumbai (LTM)	Feb 2015 – Feb 2018

KEY PROJECTS & ACHIEVEMENTS

Agentic GenAI Enablement for Enterprise Decision Automation

Agentic AI, LangGraph, LangChain, LangSmith, RAG, LLMs (Claude / GPT-4 / Gemini), FastAPI, Python, Enterprise APIs, Vector Databases, Human-in-the-Loop (HITL), Cloud-Native Architecture, Observability & Governance Controls

- Partnered with BAs and domain teams on process discovery, architecturally evaluating decision-heavy AML/KYC and compliance workflows to identify where agentic AI (RAG, stateful decisioning, HITL) delivered measurable risk and efficiency gains.

- Led end-to-end delivery of enterprise **Agentic GenAI solutions using LangGraph as the core orchestration layer**, designing stateful, multi-node agents with branching decision logic, retries, and interrupt-driven human-in-the-loop (HITL) checkpoints for regulated BFSI decision workflows.
- Implemented a production-grade intelligence layer combining **RAG and selective LLM fine-tuning, using RAG (LangChain + vector databases)** for dynamic policy and regulatory retrieval, and fine-tuned models for structured classification tasks (risk tiering, eligibility scoring), optimizing accuracy, latency, and cost.
- Delivered cloud-native, containerized agent services by **packaging LangGraph runtimes with Docker and FastAPI**, defining CI/CD-aligned build and release pipelines, durable state persistence for long-running HITL flows, and standardized delivery patterns from development through production.
- Established comprehensive **monitoring, governance, and observability using LangSmith** for agent and LLM tracing, RAG quality metrics for grounding assurance, HITL override tracking for model health, and cloud-native monitoring for API and container reliability, ensuring audit-ready, regulator-compliant GenAI operations.

SEI-GenAI Agent Implementation on Google Vertex AI

Google ADK, Gemini (Pro/Flash), Vertex AI Agent Builder, Vertex AI, GCP, BigQuery, Cloud Storage (Buckets), Python, Enterprise APIs, Google Cloud CLI, Cloud Trace, Responsible AI & Model Governance

- Designed and implemented **Google-based GenAI agents using ADK, including multi-state, stateful agents**, while defining standardized **reference architectures, RAG patterns, state management, observability, and Responsible AI guardrails** to enable governed, scalable and implemented enterprise adoption and support future delivery pipelines on Google Vertex AI

Yash Technologies – SEI UiPath RPA + Agentic AI Implementations

UiPath (Studio, Orchestrator, Action Center, AI Center), Agentic AI, GenAI Activities, Vertex AI, GCP, Document Understanding (OCR), Communication Mining, Integration Services, SharePoint, Vertex AI (enablement), MSSQL, Snowflake, CI/CD, Security & Compliance Controls

- Delivered **50+ enterprise UiPath intelligent automations across 2 regions & 8 business functions** governing solution architecture, coding standards, Orchestrator setup, and production readiness, while mentoring and leading a **10-member development team**.
- Delivered UiPath RPA bots for rule-based automation and UiPath-based autonomous agentic solutions leveraging GenAI Activities, Document Understanding, Communication Mining, and Action Center for judgment-driven use cases.
- Established reusable RPA and agent frameworks and CI/CD pipelines for UiPath, accelerating bot development by 30% and ensuring secure, compliant, and scalable deployments

DNZ RPA Automations

UiPath, SAP Automation, API Automation, Orchestrator, Process Documentation, Document Understanding

- Implemented SAP and API automations delivering **40+ FTE savings annually**, increased accuracy to **95%+**, and reduced manual intervention by **60%+** and Strengthened automation reliability via reusable components, DU/OCR workflows, and best-practice architecture
- Individually managed full client engagement lifecycle; executed migration from **SAP ECC to SAP S/4HANA** for UiPath Bots.

MCSA FSS Dev and Automation

UiPath, Automation Anywhere, Jira, ServiceNow, PowerBI, Orchestrator, Document Understanding, Python API

NB Automation

Blueprism, Automation Anywhere, Mainframe, Python, C#, JavaScript, jQuery, Testing & Support

Time Warner Managed Services

.Net, C#, Python, Blueprism, JavaScript, jQuery, Node.js, React.js, ServiceNow, MSSQL, Testing & Support

CERTIFICATIONS

- Google AI Professional Certification
- UiPath Certified Professional **Agentic AI Automation Associate**
- Google AI Essentials Certified
- UiPath Certified Professional Automation **Solution Architect**
- Certified Mendix Rapid Developer | Bizagi Modeler Certification | Agile Methodologies Certification

EDUCATION

Bachelor of Engineering – Computer Science & Engineering

GHRC, Nagpur, India | 2010 – 2014 | 7.8 CGPA
