ABOUT ME

A highly skilled and resultsdriven SOC Analyst Level 2 with 3 years of experience in cyber threat detection, incident response, and vulnerability management. Proficient in using SIEM tools like Splunk, QRadar, Logrhythm and ARCSight with a deep understanding of security protocols, threat intelligence, and incident handling. Experienced in collaborating with cross-functional teams to mitigate cybersecurity risks, investigate security incidents, and provide actionable insights to improve organizational security posture. Committed to continuous learning and staying current with emerging cybersecurity threats and technologies.

EXPERIENCE

C-EDGE TECHNOLOGIES

Feb - 2025 – Apr 2026

- Provide advanced incident response for security alerts escalated from Level 1, prioritizing critical events to minimize the impact on business operations.
- Lead investigations into security incidents, analyzing network traffic, system logs, and endpoint data to determine the scope of the attack.
- Utilize SIEM tools such as Splunk and QRadar to correlate and analyze data from multiple sources, identifying emerging threats and vulnerabilities.
- Perform in-depth analysis of malware, identifying indicators of compromise (IOCs), and aiding in the development of remediation plans.
- Collaborate with IT and network teams to contain and mitigate security threats, ensuring proper follow-up and documentation in incident response tools.
- Support the creation and refinement of security playbooks for various attack scenarios and procedures.
- Act as the primary point of contact for escalated security incidents, providing guidance and mentorship to junior analysts.
- Prepare detailed post-incident reports for leadership and management, summarizing incident timelines, root cause analysis, and lessons learned.
- Conduct periodic vulnerability assessments, identifying and remediating security gaps across the organization’s infrastructure.
- Maintain up-to-date knowledge of the threat landscape and emerging cyber threats, advising on proactive security measures.

Sattva EngiTech PVT LTD
System Engineer

May 2023 - Feb 2025

- Monitored and triaged security events using SIEM platforms, escalating critical incidents to Level 2 as necessary.
- Conducted initial analysis of security incidents, identifying and reporting false positives, as well as gathering relevant data for further investigation.
- Assisted in the development of incident response protocols and workflows to improve response times and effectiveness.
- Helped maintain and update asset inventory and vulnerability management systems.
- Supported daily SOC operations by ensuring proper handling of alerts and continuous monitoring of security tools.

Education

Master of Science In Cyber Security Domain

April 2023 - April 2025

Relevant courseworkCybersecurity Fundamentals, Network Security, Threat Detection, Incident Response, Cryptography, Ethical Hacking

Bachelor of Science In Information Technology

April 2021 - April 2023

Relevant courseworkCybersecurity Principles, Network Defense, Threat Intelligence, Incident Management, Encryption Technologies, Penetration Testing

TECHNICAL SKILLS

SIEM

- Tools: Splunk, QRadar, ArcSight, ELK, LogRhythm
- Endpoint Detection & Response (EDR): CrowdStrike, SentinelOne, Carbon Black
- Vulnerability Management: Nessus, Qualys, OpenVAS
- Network Tools: Wireshark, Nmap, tcpdump
- Operating Systems: Linux, Windows, macOS
- Cloud Security: AWS, Azure, GCP
- Scripting: Python, PowerShell, Bash
- Version Control: Git
- Incident Management Tools: ServiceNow, Jira, Remedy

PROJECTS &
CONTRIBUTIONS

Threat Hunting Initiative

Led a team to conduct proactive threat hunting in the network, using SIEM logs and threat intelligence to uncover indicators of compromise before they became active threats.

Automation of Alert Escalation

Developed a Python script that automated the escalation process for specific high-priority incidents, reducing response times by 20%.

Incident Response Playbook Development

Contributed to the creation of an incident response playbook that standardized processes for handling DDoS attacks, insider threats, and ransomware incidents.
