Education

ABES ENGINEERING COLLEGE, GHAZIABAD

Bachelors Of Technology (B TECH)

(70%) 2020 – 2024

Ghaziabad, Uttar Pradesh

Experience

Excellence Technologies

Mar 2024 - Present

Python Developer

Noida, U.P.

- Developed and maintained REST APIs using **FastAPI, Django, and Flask**, delivering scalable, production-ready backend services.
- Built and enhanced three major projects:
 - **Hotel & Rent Recommendation Platform** leveraging ML/AI-based scoring and recommendation logic.
 - **AI Agents Platform** using GenAI models (OpenAI, Claude, Gemini) with **LangChain, LlamaIndex**, and vector DBs like **Pinecone**.
 - **User Authorization & Digital Information Storage Platform**, implementing secure tokenized data storage using **JWK, JWT** flows, and encrypted user data.
- Implemented background task processing and automation using **Celery** and **Redis**.
- Worked on web scraping for data ingestion using **BeautifulSoup4** and external APIs.
- Designed, optimized, and maintained both relational and non-relational databases, ensuring clean schemas and high-performance queries.
- Integrated third-party services, authentication flows, and secure API communication with best practices in authorization and data handling.
- Managed deployments on **AWS** including **ECR, ECS, App Runner, EC2, RDS, S3**, and configured reverse proxies using **Nginx**.
- Containerized and deployed applications using **Docker**, Git workflows, and server-side process managers like **supervisor** and **systemd**.
- Built AI-powered features using **OpenAI, Azure OpenAI, Claude**, vector search, embeddings, and retrieval pipelines.
- Collaborated with team members, contributed to requirement discussions, and maintained clear communication with clients.
- Followed **Test Driven Development (TDD)** practices to ensure reliability and maintainability across projects.

Projects

Ecosysteme.ai Fastapi, Langgraph, Pinecone, AI Agents, celery, redis, Docker, Postgresql. Graph Api's. AWS serverless, Django

- Built a platform offering **multiple AI agents** including Sales, Customer Support, Appointment Setter, HR, SEO, Phone Calling, and Email Campaign agents.
- Enabled agents to operate across **Instagram, Facebook, WhatsApp, email, and phone** for fully automated customer conversations, lead handling, and engagement.
- Developed a unified **Knowledge Base** system allowing users to upload PDFs, images, documents, and website links to train and personalize agent responses.
- Delivered end-to-end **AI-driven automation**, helping businesses run chats, calls, support tasks, and marketing workflows without manual intervention.

Passivebolt Python, Django, Flask, Redis, JWK, Postgresql, Keycloak, sphinx

- Designed a secure identity management platform that stores and retrieves user information using **JWK-based encryption and tokenization**.
- Implemented a system that assigns encrypted values for all user attributes, ensuring privacy, data safety, and controlled access.
- Built mechanisms for user-level authentication with **holder ID, issuer ID**, and system-level verification flows for trusted access.
- Enabled secure exchange of user data between applications by generating machine-readable authentication tokens and encrypted identity objects.

Altodia Python, Fast API, Celery, Redis, Postgres, Scrapping, Docker, AWS Services.

- Built a system where users can enter their rental or property preferences, and the platform automatically scrapes listings from websites like Airbnb, SeLogger, and Leboncoin in real time.
- Processed scraped listings using **embedding models**, stored vectors in the database, and matched them with user preferences to generate accurate property recommendations.
- Implemented automated workflows that search the vector database daily and send property alerts to users based on new or updated listings.

Technical Skills

Backend: Python, Flask, Django, Rest APIs, FastAPI, Celery, Redis, Templating

AI & GenAI: LangChain, LlamaIndex, Pinecone (Vector DB),

OpenAI, AI Agents, Embeddings, Semantic Search

Databases: MySQL, PostgreSQL, SQLite3, Vector db

Devops: Docker, AWS services, GCP, Nginx, Supervisor/systemd deployments, Linux
