Cell: (+91) 9063583747

Career Brief:

Accomplished Full Stack Developer with over Around 6 years of experience focused on both front-end and back-end technologies such as React JS, Java, Spring, Spring Boot, Hibernate, SQL, and Node JS. Skilled in creating and developing intricate web applications, microservices, and enterprise-level solutions. Proficient in assessing requirements, crafting effective code, and working alongside cross-functional teams to produce top-notch software solutions.

Professional Summary:

- Working as A Senior Software Engineer with Concentrix Since October 2025 to December 2025.
- Worked as A Software Engineer with Quest Global, Bangalore Since March 2023 to September 2025.
- Worked as A Software Engineer with Cognizant, Bangalore Since August 2019 to August 2022.

Managerial Abilities:

- Possess around 6 years of comprehensive experience in the IT industry, specializing in Java-based application development and full-stack solutions.
- Adept in Java 8, with strong command over Spring Boot, Spring MVC, Spring Core, and microservices-based architecture.
- Demonstrated expertise in full-stack development leveraging React JS, Spring Boot, Node JS, and SQL Developer across diverse enterprise applications.
- Containerized applications using Docker and managed deployments via Kubernetes, including orchestrating services on Amazon EKS and Azure AKS.
- Demonstrated expertise in full-stack development leveraging React JS, Spring Boot, Node JS, and Python for scripting, automation, and backend API development.
- Experienced in building Python-based automation scripts for API testing, log analysis, and data-driven tasks, reducing manual efforts and improving delivery efficiency.
- Proficient in developing REST APIs using Flask/Django, and utilizing Python libraries like Pandas, NumPy for data processing and analytics.
- Hands-on experience in integrating Python automation with Postman, Jenkins, and CI/CD pipelines for continuous testing and faster deployments.

- Integrated RESTful APIs across distributed services for seamless communication between frontend and backend modules.
- Utilized PostgreSQL, MySQL, and Azure SQL to design efficient, normalized databases for high-volume applications.
- Proficient in architecting, building, and maintaining scalable web applications and enterprise-grade backend services.
- Engineered high-performance backend systems using Spring Boot and Node JS to support business-critical applications.
- Created modular, reusable React components and managed state efficiently using Redux and Context API.
- Followed best practices in cloud cost optimization, logging, and monitoring using AWS CloudWatch and Azure tools.
- Hands-on experience in designing and integrating RESTful APIs, along with seamless integration of third-party services.
- Skilled in using Git and Bitbucket for source control, and experienced with JIRA for agile tracking and sprint planning.
- Familiar with continuous integration and delivery (CI/CD) practices, including pipeline creation and automation using Jenkins.
- Well-versed in writing unit tests with JUnit and Mockito, and conducting performance testing using JMeter.
- Strong database skills including SQL query development, schema design, and ORM-based data interaction.
- Experienced in analyzing requirements, drafting technical documentation, and preparing system architecture and design specifications.
- Implemented secure authentication and authorization mechanisms to ensure application-level security.
- Utilized Postman extensively for API testing and automation to validate service reliability and performance.
- Active contributor in Agile teams, participating in stand-ups, sprint planning, retrospectives, and regular progress updates.
- Collaborated effectively with QA, DevOps, and Product teams to deliver high-quality, production-ready features.
- Led the team during Java 8 migration initiatives, ensuring compliance with coding standards and best practices.
- Recognized as a dependable team player with strong communication skills, adaptability, and the ability to thrive in high-pressure environments.

Educational Qualifications:

Completed B. Tech from JntuK University in 2017

Knowledge Summary:

- **Frontend:** React JS, HTML5, CSS3, JavaScript, TypeScript, Material UI
- **Backend:** Java, Spring, Spring Boot, Hibernate, Node JS.
- **Cloud Platform:** Lambda, CloudWatch, Azure App Services, Azure SQL.
- **Containerization:** Docker, Kubernetes / Amazon EKS / Azure AKS
- **Database:** SQL, MySQL, PostgreSQL,
- **Tools:** Git, GitHub, Jenkins, Maven, VS Code, Postman
- **Others:** RESTful APIs, Microservices, Agile/Scrum, JIRA, Docker.

➤ Project:3:

Project Name	LinkedIn	
Client	LinkedIn	
Role	Senior Software Engineer	
Organization	Concentrix	
Team Size	18	Markets: USA

Roles and Responsibilities:

- Developed and maintained backend applications using Java, Spring, and Spring Boot
- Designed and implemented RESTful web services and microservices architecture.
- Used Hibernate/JPA for ORM and wrote optimized SQL queries for relational databases.
- Implemented business logic, validations, and exception handling following clean code principles.
- Integrated applications with internal systems and third-party APIs.
- Performed unit testing and integration testing using JUnit and Mockito.
- Participated in code reviews to ensure quality, performance, and coding standards.
- Worked in an Agile/Scrum environment, contributing to sprint planning and daily stand-ups.
- Collaborated with cross-functional teams including frontend, QA, and DevOps.
- Supported production deployment, bug fixing, and performance tuning.
- Ensured application security, scalability, and high availability.

➤ **Project:2:**

Project Name	Progressive Insurance	
Client	Progressive Insurance Domain	
Role	Software Engineer	
Organization	Quest Global	
Team Size	25	Markets: USA

Roles and Responsibilities:

- Developed and maintained scalable enterprise applications for Progressive Insurance using Spring Boot and Spring MVC, applying core J2EE design patterns including Factory, DAO, Singleton, and MVC for structured and efficient server-side logic.
- Designed and implemented microservices for customer onboarding, quote generation, and policy renewals using Spring Boot and deployed them on AWS Lambda/Azure App Services.
- Implemented role-based access and secure data handling for PII (Personally Identifiable Information) in compliance with industry regulations such as HIPAA and GDPR.
- Leveraged Hibernate ORM to interact with relational databases, employing HQL and Criteria APIs within the DAO layer for robust data operations.
- Built and consumed RESTful web services within a microservices architecture; utilized Rest Template and Feign Clients to enable seamless communication across heterogeneous services.
- Integrated React-based front-end modules with Spring Boot APIs to ensure responsive UI and real-time data flow, enhancing user experience for policy management and claim processing modules.
- Containerized insurance microservices with Docker, orchestrated deployments with Kubernetes (EKS/AKS), and enabled scalability during peak insurance events (e.g., open enrollment).
- Engineered high-throughput backend services with multi-threading support for quote generation and policy lifecycle workflows, optimizing latency-sensitive insurance operations.
- Designed and optimized database schemas for Oracle and PostgreSQL; authored complex, performance-tuned SQL queries to support transactional operations and reporting needs.
- Worked with MongoDB to manage semi-structured data related to customer behavior analytics and real-time notification systems.
- Conducted thorough unit and integration testing using JUnit 5 and Mockito to ensure reliability and accuracy of policy and claims services.
- Actively contributed in Agile ceremonies including sprint planning, daily stand-ups, and retrospectives; ensured timely delivery of user stories and feature enhancements.
- Participated in Progressive-specific release cycles by coordinating with QA, DevOps, and product stakeholders, supporting successful deployments and post-release issue resolution.

- Managed complex transaction workflows in policy renewals and claims adjudication, ensuring data integrity and ACID compliance throughout the application lifecycle.
- Followed SOLID principles and Progressive’s internal Java coding standards, ensuring maintainable and extensible code across distributed teams.
- Utilized Maven for dependency management and automated builds; ensured consistent delivery pipelines using Jenkins-based CI/CD workflows.
- Performed peer code reviews and participated in technical discussions to uphold code quality and maintain a high standard of engineering practices.

➤ **Project:1:**

Project Name	Lloyds	
Client	Lloyds Banking Group plc (banking domain)	
Role	Software Engineer	
Organization	Cognizant	
Team Size	20	Markets: USA

Roles and Responsibilities:

- Designed, developed, and maintained microservices for Lloyds Banking applications using Java 8, Spring Boot 2+, and Spring Framework, ensuring modular and scalable service components.
- Developed secure and scalable backend modules for digital banking applications using Java, Spring Boot, and Hibernate, supporting real-time account and transaction management.
- Built secure and high-performing RESTful APIs using Spring MVC and Spring Boot, supporting critical retail and commercial banking functionalities such as payments, fund transfers, and account management.
- Built responsive front-end components using React.js and Material UI for customer-facing applications like internet banking portals, loan dashboards, and credit card management.
- Developed interactive and responsive front-end interfaces using React.js, enhancing customer experience across online banking portals and internal finance dashboards.
- Implemented authentication and authorization flows using Spring Security and OAuth2 to ensure compliance with internal security policies and financial regulations.
- Integrated microservices to enable seamless communication between modules handling KYC, transaction history, and loan processing workflows.
- Containerized critical banking services using Docker, deployed via Kubernetes (EKS/AKS) to ensure high availability during peak banking hours.
- Employed Spring Data JPA and Hibernate ORM for efficient data access and manipulation in PostgreSQL databases, ensuring transactional integrity.
- Created clean and RESTful API endpoints with detailed documentation for client and third-party service consumption, aligned with OpenAPI specifications.
- Worked in Agile Scrum environment; actively participated in sprint planning, backlog grooming, daily stand-ups, and retrospectives to deliver iterative improvements.

- Utilized an API Gateway for request routing, rate-limiting, and centralized authentication to simplify and secure access to distributed banking services.
- Developed and maintained backend services integrated with PostgreSQL and optimized query performance to support high-volume banking transactions.
- Integrated AWS SQS queues for asynchronous messaging between microservices, enabling decoupled communication and enhanced system resilience.
- Containerized microservices using Docker for consistent deployment across development, QA, and production environments, improving release cycle efficiency.
- Managed project dependencies and build lifecycles using Maven; collaborated with DevOps for Jenkins-based CI/CD pipeline automation.
- Developed unit and integration tests using JUnit 5 and Mockito to validate business logic across key banking modules, ensuring test coverage and code reliability.
- Ensured code quality through rigorous code reviews, adherence to Lloyds' internal coding standards, and continuous integration best practices.
