SAHITH SARASWATHI

Data Scientist

sahith.dingi@gmail.com

<https://www.linkedin.com/in/sahith-saraswathi-2b9498202/>

<https://github.com/sahith003>

SUMMARY

Data scientist with practical experience in analytics, machine learning, and statistical modeling through focused training and projects. Skilled in Python, SQL, and visualization tools to extract insights and support data-driven decisions. Driven, analytical, and passionate about turning complex data into strategic value.

EDUCATION

PES University

Masters degree in Data science and Machine Learning
2020 – 2022

Marri Laxman Reddy Institute Technology & Management

Bachelors Degree in Computer Science Engineering
2015 – 2019

SKILLS

- **Programming:** Python, SQL
- **Frameworks:** Pandas, NumPy, SciPy, sklearn, matplotlib, seaborn, OpenCV, pytorch and keras
- **Data Science:** Machine Learning, Deep Learning, Natural Language Processing, Time Series Forecasting, statistics, Data Analytics, Computer Vision, Data Visualization, Excel and basic algorithms.
- **GenAI:** LLM (large language model), OpenAI, Gemini, Llama, Hugging Face, LangChain, RAG, prompt engineering, fine tuning, stable diffusion. vector database (ChromaDB), FAISS.
- **Business Intelligence Tool:** Tableau

CERTIFICATIONS

- Advanced Generative AI (2024) from Innomatics research labs
- Career Essentials in Generative AI by Microsoft(2024)

PROFESSIONAL EXPERIENCE

Data Scientist

Soulpage IT solutions | December 2022 – May 2023

- Developed a risk prediction model using patient vitals and disease status ,also build the disease prediction model with **98% accuracy**.
- Extracted structured data from clinical report tables using OCR, table detection (TableNet), and classification techniques, achieving **93% classification accuracy and 0.1 loss in detection**.
- Designed features for patient risk assessment and enabled automated data extraction from reports, enhancing monitoring, data usability, and reporting efficiency.

Data Scientist Intern

Soulpage IT solutions. | June 2022 – November 2022

- Developed a recommendation system for a jewellery e-commerce platform using matrix factorization and text similarity to deliver personalized product suggestions.
- Implemented advanced model validation and selection techniques in the company's internal AutoML tool, improving the efficiency and reliability of automated model building.

PERSONAL PROJECTS

Alzheimer's Disease Prediction using CNN-XGBOOST

- Developed a multiclass classification model using CNN-XGBOOST and stacked pretrained models to detect Alzheimer's stages from MRI scans, achieving **93% accuracy**.
- The model outperformed other deep learning approaches, offering a diagnostic tool to support early detection and treatment planning

RBI Regularity Chatbot (RAG)

- Developed an AI chatbot using Langchain and RAG to provide context-aware answers on RBI risk guidelines, leveraging FAISS and OpenAI for semantic search and response generation.
- Applied NLP to simplify complex regulations, enhancing clarity and supporting compliance workflows.

Health Insurance Prediction

- Achieved high-accuracy insurance premium prediction (**$R^2 = 0.98$**) using customer demographics and health attributes.
- Enhanced pricing fairness and personalization, boosting customer satisfaction and data-driven decision-making for insurers.
