KEY PROJECTS

Divyang Career

- Divyang Career is a user-friendly, accessible platform designed to bridge the gap between job seekers with disabilities and employers. This platform enables government bodies, NGOs, and private organizations to easily post job openings, while candidates with disabilities can apply for relevant opportunities.
- I created use case and user story documents, developed the project plan, and estimated the project timeline. I also designed the solution by making the data flow diagram, performed market research, and conducted a gap analysis for the project and coordinated with both internal and external stakeholders throughout the project's lifecycle.

Newsroom 360 and Nebula | AI MVP Projects

- Newsroom360 is an AI-based, one-stop solution designed for MNCs (such as TCS and Infosys), catering to both job seekers and enterprise buyers. This product allows users to easily generate and understand content in various formats, including text, audio, images, and videos.
- Users can perform tasks such as searching for real-time information, finding job openings, uploading documents and media files for summarization, and downloading or copying the generated content.
- Nebula is an AI-based application that collects trading data from different platforms like Reddit, NewsWhip, Twitter, and Instagram through their APIs. Simultaneously, with the help of this trending data, the application generates real-time content according to the content creator's preferences through OpenAI API. Content creators can then share this content on any platform of their choice.

CERTIFICATIONS
