WORK EXPERIENCE

Network Engineer L2-Bharti Airtel Ltd **Dec 2024 - Aug 2025**

Taking charge of incidents, service requests, and vendor management to enhance service delivery.
Configuration of Huawei, cisco, Firewall, ZTE switches configuration.
Providing L1 support to configure Forti-Gate firewall
Handing Mpls4G network
Handling Microsoft Operation with new delivery. Installing new AVADA mux card
Proactively handling escalations from end customers and clients, mitigating issues to maintain service quality.
Ensuring rigorous internal controls and process compliance across IT organizations through regular audits and assessments.
Orchestrating key activities including business movements, migrations, mass deployments, and new business setups.
Compiling and preparing detailed reports, ensuring optimal performance, and meticulously maintaining records of service level agreements for customers.
Coordinating with NOC (Network Operations Centre) and RE/SAM (Regional Engineering/Service Assurance Management) for root cause analysis and resolution of repeat ticket incidents.

Project Manager-Reecomps Teleservices **Aug 2023 - Dec 2024**

As a Project Manager at Reecomps Teleservices, responsible for the end-to-end management of telecom projects, ensuring timely delivery, budget control, and high-quality implementation of network solutions. Acts as the primary point of contact between clients, vendors, and internal teams to deliver telecom infrastructure projects aligned with business goals.
• Plan, execute, and manage telecom projects from initiation to closure, ensuring adherence to timelines, scope, and budget.
• Manage project lifecycle including requirement gathering, planning, resource allocation, execution, monitoring, and final delivery.
• Coordinate with clients, vendors, and internal teams (Network Engineers, Field Engineers, Operations) to ensure seamless project execution.
• Define project scope, goals, deliverables, and resource requirements.
• Monitor and track project progress using project management tools and KPIs.
• Manage risks, identify potential bottlenecks, and implement mitigation strategies.
• Ensure projects comply with telecom industry standards, safety regulations, and internal policies.
• Facilitate regular project status meetings and communicate project progress to stakeholders.
• Prepare and maintain detailed project documentation, including project plans, schedules, budgets, and reports.
• Oversee installation, commissioning, and testing of network equipment (routers, switches, fiber installations).
• Handle vendor management, procurement of materials, and budget tracking.
• Manage multiple projects simultaneously, ensuring on-time delivery without compromising quality.
• Ensure customer satisfaction by addressing queries, resolving issues, and providing regular updates.
• Post-project analysis and documentation of lessons learned for process improvements.

Network Engineer-Tech Mahindra **Feb 2022 - Aug 2023**

As a Network Engineer in the creadit Swiss Project at Tech Mahindra, responsible for ensuring the stability, reliability, and performance of the bank's critical network infrastructure. The role involves proactive monitoring, incident resolution, configuration management, and providing seamless connectivity to support critical banking applications and financial

transactions.
Monitor and manage the bank's network infrastructure (LAN/WAN, MPLS, VPN, Firewalls, Switches, Routers).
• Troubleshoot and resolve network issues related to connectivity, latency, packet drops, link failures, and performance degradation.
• Perform configuration, installation, and maintenance of network devices such as Cisco, Juniper, Fortinet, and other enterprise-grade hardware.
• Work closely with SWIFT infrastructure team to ensure secure and compliant network connectivity for financial messaging services.

Data Center Engineer-Lobo Staffing Solutions -Tata Communication Ltd) **Jul 2013 - Jul 2021**

• Monitor data center infrastructure for performance, capacity, and fault tolerance.
• Troubleshoot hardware, software, and network issues to ensure minimal downtime.
• Perform routine preventive maintenance on hardware and system components.
• Manage cabling, rack management, and physical infrastructure.
• Ensure compliance with data center policies, security protocols, and best practices.
• Handle backup and disaster recovery procedures.
• Collaborate with network and system administrators, field engineers, and service providers.
