Profile

An evolving Data Scientist and AI/ML Engineer, driven by the insights from data and visuals. Possessing strong mathematical articulation and imagination. Consistently working to improve myself by learning, implementing, and evaluating. Exploring the possibilities in the field of AI/ML and GenAI.

Professional Experience

Data Scientist, *Blackcoffer Pvt. Ltd.* 09/2025 – Present | Gurugram, India
Promoted from an associate role with increased responsibilities.
Currently working on building an AI driven solutions using, Vue Nuxt 3, Snowflake (Snowpark), LLM Engines. Making advance AI pipelines that query from data warehouses and generates a natural language response through a real-time analytics dashboard. Solution is designed to make data insights more accessible through natural language queries.

- I am also involved in enhancing Snowflake warehouse autoscaling, exploring how AI-driven recommendations can make resource management more adaptive compared to rule-based thresholds.

Data Science Associate, *Blackcoffer Pvt. Ltd.* 01/2025 – present | Gurugram
Worked in a SaaS based setting, with high paced development. Backend engineering using POSTGRESQL, AWS, and NLP techniques such as RAG, GenAI and others in over 2 major projects within the company. Directly coordinated with the clients of the company to deliver deployed projects on EC2 instances on AWS and GCP. EDA Techniques, Fine-tuning and optimising transformers using DL algorithms and techniques. Highlight projects : Developed digitalregintel.com amongst many others.

AI Automation Intern, *Quantuva Technologies* 10/2024 – 01/2025 | Hyderabad, India
Deployed Voice Calling Agents based on speech modality models, finetuned the state-of-the-art models to attain end to end automation for AI calling to serve. Integrated RAG model for effective context based outputs. Assisting in developing and testing automation workflows. Conducted research on AI tools and automation techniques. Supporting the team in analyzing and optimizing automated processes.Documenting automation workflows and maintaining project reports. Technologies primarily used : RAG, NLP, Development, Fast APIs.

Machine Learning Intern, *DSCVRY AI* 01/2024 – 02/2024 | Chennai
Deployed Optical Character Recognition based on machine learning models based on complex handwritten and pretexted data sheet. Developed and deployed OCR functions and APIs, achieving a 30% increase in character recognition accuracy over conventional market OCR technology. Engineered a data pipeline to preprocess the documents for OCR, efficient in columetric and tabular data extraction.

Research Intern, *Sai University x IIT Bombay* 09/2023 – 01/2024 | Chennai
Independent Research under Prof. Krithi Ramamritham. IIT-Bombay under his guest lecture course at Sai University.
The paper proposes a deep learning-driven personalized stock trading system using three models: RNN for fundamental analysis, CNN for technical analysis, and LSTM/BERT for sentiment analysis. It integrates smart contracts for automated trade execution. Ensemble learning consolidates model outputs for improved buy/sell predictions, offering transparency and risk management via blockchain. The system aims to address limitations of traditional trading by optimizing decision-making through data-driven insights and automation.

Projects

End To End Talent Acquisition AI Automation
Architected and deployed a chatbot system for automated interview management, leveraging **FastAPI** to build RESTful APIs for real-time interaction and candidate evaluation workflows. Integrated the **LLaMA AI model** to generate contextually accurate responses with customized prompts tailored to different interview stages. Engineered a **multi-step API pipeline** for Dynamic Prompt Generation and Evaluation Scoring. Designed scalable data models with **Pydantic** for candidate details, chat messages, and interview records, ensuring type safety and validation across API layers.

(NER) Named Entity Recognition with Transformers
Model Fine-Tuning: Utilized the DistilBERT pre-trained model to achieve a significant performance improvement, reaching an F1-score of 92% on the CoNLL-2003 dataset. Data Handling: Processed and tokenized over 20,000 sentences to align with NER tags, ensuring high accuracy in entity classification. Evaluation Metrics: Employed evaluation metrics, achieving precision of 91%, recall of 93%, and overall accuracy of 94%.

US Stock Portfolio Distribution System, *Equal Weight Distribution of S&P 500*
Developed an application to calculate equal-weight allocations for an S&P 500 portfolio based on real-time stock prices. Data Retrieval: Automated the fetching of real-time prices for all S&P 500 constituents, handling data for over 500 stocks. Equal-Weight Calculation: Implemented a system to calculate the number of shares to buy for each stock to achieve an equal-weight allocation, based on user input for portfolio size. Real-Time Updates: Integrated APIs to ensure stock prices are up-to-date, enhancing the accuracy of the allocation recommendations.

Skills

LangChain | LlamaIndex | Computer Vision | Fine-Tuning | FAST API + REST API | LLM Fine Tuning | Natural Language Processing (NLP) | Neural Network and Transformers | ML Algorithms and Optimization | Retrieval-augmented generation (RAG) | Tensorflow | PyTorch | Snowflake (Snowpark) | Statistics and Probability | Visualization | Data Collection and Scraping | Time Series Modelling | Scientific Data Analysis

Courses

Computing and Data Science Major
Natural Language Processing | | Computer Vision | Deep Learning | Machine Learning | Distributed Computing and Big Data | Reinforcement Learning | Data Analysis and Visualization | Python Programming | Data Base Management System | Smart Energy & Real Time Systems | Numerical Methods | Calculus | Linear Algebra

Education

B.Tech [Computing and Data Science], *Sai University* 2021 – present | Chennai, India
