EDUCATION

2020-2021 **Master of Technology** in Thermal and Fluid Engineering**,** *Department of Mechanical Engineering***,** *Indian Institute of Technology Bombay, Mumbai, India,* **CGPA: 8.39/10**

2016-2020 **Bachelor of Technology***, Department of Mechanical Engineering, Indian Institute of Technology Bombay, Mumbai, India,* **CGPA**: **8.39/10**

WORK EXPERIENCE

SR. AI/DATA ENGINEER | Agnie Consulting (Client: Abcam Limited, UK) [Jan'25-Present]

- Engineered production-grade, multi-tenant AI lead-generation solutions on AWS Fargate using **Python**, **Snowflake** and **Terraform**, reducing onboarding time for global business units by **~75%**
  - Delivered Salesforce-ready data (SFDC) enabling direct lead activation, conversion tracking, and analytics
- Architected and **packaged** a reusable **AI lead scoring** framework in Python, exposing a unified interface adopted across multiple AI lead-generation applications
  - Versioned and distributed via **GitLab CI** pipelines to enable controlled releases and consistent rollout
- Designed an **agentic AI system** hosted on MCP server to autonomously discover, qualify, and ingest tender data from external websites using keyword-driven filtering, enabling sales teams to query and derive insights

SR. DATA ANALYST | FischerJordan [Jan'24-Dec'24]

- Improved system efficiency by creating pipeline to integrate diverse data sources (CSVs, JSONs, APIs) into **BigQuery** database with **150M+** rows for real estate enrichment analysis using **SQL** and **Python** transformations
- Developed and deployed SaaS solution using **AI/LLM** techniques to summarize email interaction between users
  - Implemented a **monitoring** and **caching** system, significantly reducing operational AI costs and improving observability and response times for data summarization.
- Created **ML-based** investment strategy model using 50+ parameters, achieving consistent returns in back test
  - Implemented robust algorithmic trading code in Python to paper trade the strategy in Indian equity market
  - Automated tracking dashboard for strategy using **Streamlit** and **Google Sheets** to analyse the trades analytics

DATA ANALYST | FischerJordan [Mar'23-Jan'24]

- Orchestrated implementation of **chatbot** leveraging **LLMs** to streamline interactions with structured data
  - Developed and curated training datasets to **fine-tune** OpenAI GPT-3.5 for chatbot's conversational module
  - Engineered robust **ETL** pipelines, transforming data from Redshift **SQL** to **Elasticsearch** on **AWS** infrastructure
  - Executed **RAG** model for **semantic caching**, optimizing data retrieval efficiency and responsiveness in product
  - Implemented template-based responses & data manipulating techniques, resulting in **6x faster** bot response
- Performed historical analysis on **algorithmic trading** strategies to finetune technical parameters, aiming to enhance annualized returns while minimizing max drawdown for a trading strategy.
  - Enhanced trading analysis by shifting codebase from **Python** to **C++**, reducing the **execution time by 80%**
- Built **API** endpoint using social media data integration with robust validation tailored for underwriting purposes
  - Implemented **LLM-based** and web scraping frameworks to target incumbent B2B SaaS product services
  - Constructed a **LinkedIn data pipeline** with prioritization algorithms for high-profile contact outreach for client
- Organized and led a python **training** on Linear Regression and Logistic Regression to improve team capabilities

ASSISTANT MANAGER | Suzlon Energy Ltd [Sept'21-Mar'23]

- Recognized with an **A+ (highest rating)**, for outstanding performance, being the sole recipient in the joining batch

TECHNICAL AND PERSONAL PROJECTS

MYFINANCE – PERSONAL FINANCIAL ANALYTICS ENGINE

- Engineered an extensive ETL pipeline for multi-source personal financial data, slashing manual tracking time
- Architected a **self-learning NLP pipeline** using **Llama 3** (**Hugging Face** model + tokenizer, served via **Ollama**) to parse financial emails, achieving 95% sustained accuracy with near-zero manual maintenance

UPWORK AUTOMATION

- Improved relevant job matches by **50%** via developing a **python automation** tool to scrape and filter job listings
- Enhanced proposal acceptance rates by **20%** via optimizing tailoring of tonality & length using **LLM** techniques

TECHNICAL SKILLS

- **Programming + ML/AI**: Python, SQL, Terraform, NLP, FastAPI, Streamlit, Pandas, Huggingface, AWS, GCS, Airflow
- **Database**: Postgresql, Redshift, Snowflake, Google BigQuery, Sqlite3, MongoDB, Elasticsearch, Opensearch, Redis
