Anoop Mishra
React Native Developer
anupcr191@gmail.com
+91 9175005692

Summary of skills

- Professional full stack development with **8+ Years** experience in designing and developing ERP level applications client-server applications, Windows and Web-based solutions using **React, React Native, Mongo DB, Angular, Node.js framework.**
- **6+ Years** of Professional Experience in **React Native Mobile App** Development.
- Extensive experience in crafting web applications and Client/Server solutions utilizing **React**, HTML, JavaScript, AJAX, and CSS, coupled with proficiency in Adobe Photoshop.
- Adept in client-side scripting languages and server-side scripting languages, including JavaScript, jQuery, JSON, bootstrap, and **React**
- Developed and maintained cross-platform mobile applications using **React Native** for both iOS and Android platforms.
- Utilized **React Native** components, libraries, and APIs to build responsive and intuitive user interfaces.
- Proficiently utilizing **Express.js** for building RESTful APIs and web applications in the Node.js ecosystem.
- Successfully integrated **Node.js** applications with MongoDB and MySQL databases, showcasing expertise in efficient data modeling and retrieval.
- Seamlessly integrated **Node.js** applications with frontend technologies like **React**, creating a harmonious interplay between server and client.
- Proven track record of integrating **Firebase** authentication strategies and database functionality into Angular projects, executing diverse CRUD operations for efficient data storage.
- Integrated RESTful APIs and GraphQL endpoints to fetch and manage data within **React Native** applications.
- Implemented Material UI concepts in **React** to engineer custom component features, demonstrating proficiency in creating tables, grids, menus, and filters for optimal UI/UX development.
- Implemented various authentication strategies, including Google Authentication, Facebook Authentication, Twitter Authentication, and more, in **React** applications.
- Extensive experience with **React** on the Frontend, utilizing it as a fast and lightweight cross-platform framework for building powerful applications.
- Worked on Version Control Systems **Visual Source Safe, TFS (Team Foundation Server)** and **Git** for updating, accessing and managing the code and performed **continuous integration**.
- Experience in creating responsive User **Interface (UI)** layout screens with front-end technologies
- HTML, CSS, JavaScript and TypeScript, Material UI, Bootstrap, Angular, Ionic.
- Hands on Experience in Unit Testing of Modules using **JEST** and **Cypress.** System Testing and collaborated with end users when User Acceptance Testing (UAT) has been done.
- Worked on **Azure DevOps and JIRA.**

Technical Skills:

Web Application	**React, React Native, Angular, Ionic Framework, Node.js, Next.js, Nest.js, Microservices, Express JS**
Web Technologies	HTML5, CSS3, XML, JSON, AJAX, JavaScript, Typescript, jQuery
Databases	SQL Server (2014,2012,2010,2008), MongoDB, PostgreSQL, GraphQL
Languages	C#, JavaScript, TypeScript
Middleware	Web Services, WCF, SOAP, RESTful
Microsoft Technologies	ASP.NET 5.0/4.5/4/3.5, .NET Framework XAML, LINQ, ADO.NET, Entity framework, WCF, WPF, Web API
Application Development Tools	Team Foundation Server (TFS), JIRA, Git, MS Office, Visual Studio.NET,

Education Details-

BTech IT, Chandigarh University

Project Details:

Company: Nepon Solutions **(Mar 2025 – Mar 2026)**
Role: Full Stack Developer
Project Name: HandyPro

Description:
Specialized in Handyman & Home Modification Commercial Services

Responsibilities:

- Designed and implemented user interfaces using React, ensuring a seamless and responsive experience for users.
- Developed robust and scalable mobile applications for both iOS and Android using React Native, providing a consistent user experience across platforms.
- Integrated RESTful APIs and third-party services with React Native, dynamically fetching and displaying data in the application.
- Created reusable React Native components, streamlining development and maintaining consistency throughout the app.
- Wrote clean and efficient React components, services, and directives to enhance code readability and performance.
- Collaborated with the backend team to integrate frontend components with server-side APIs for smooth functionality.
- Designed and implemented scaling strategies for MongoDB clusters, ensuring the system could handle increased data loads effectively.
- Configured Babel to transpile modern JavaScript (ES6 and beyond) into backward-compatible code for broader browser compatibility.

- Developed and maintained server-side logic with Node.js, ensuring high performance and responsiveness for web applications.
- Built real-time applications using Node.js, leveraging frameworks to enable bidirectional communication.
- Developed custom middleware in Node.js for handling authentication, authorization, and request processing.
- Used TypeScript to improve type safety and maintainability in React components and other parts of the codebase.
- Integrated MongoDB as the database solution for efficient data storage and retrieval.
- Wrote unit and integration tests for Node.js and React applications, utilizing Jest and Mocha to ensure code reliability.
- Deployed, managed, and scaled applications on AWS, utilizing various AWS services for cloud infrastructure.
- Orchestrated the build process with Webpack, optimizing bundle size and enhancing overall application performance.

Environment: React Native, React, Node JS, Redux, UI/UX, JavaScript, WebPack, Mongo DB, HTML, Tailwind CSS, Azure Devops.

Company: ZineIQ **(July 2024 – Feb 2025)**
Role: Sr Software Engineer
Project Name: SG-TraDEX (Supply Chain-Digital Infrastructure)

Description:
Singapore Trade Data Exchange, is a digital infrastructure that facilitates trusted and secure sharing of data between supply chain ecosystem partners.

Responsibilities:

- Implemented reselect or memoization techniques to optimize **Redux** selectors for efficient data retrieval.
- Leveraged **React Native** lifecycle methods to handle component mounting, updating, and unmounting, optimizing performance and resource management.
- Implemented reselect or memoization techniques to optimize **Redux** selectors for efficient data retrieval.
- Utilized **CSS** pre-processors like **Less and SASS** to improve code organization and maintainability.
- Implemented modern **JavaScript (ES6**) features to enhance code readability and maintainability.
- Successfully integrated **Material-UI** components and styles into React projects to achieve consistent and aesthetically pleasing UIs.
- Designed comprehensive and scalable **GraphQL** schemas to represent complex data models and relationships.
- Implemented route guards and navigation guards using **React Router**, enhancing application security and user experience.
- Implemented real-time communication features using **WebSocket** to enable live updates and interactive user experiences.
- Integrated with non-relational databases **MongoDB** for data storage and retrieval.
- Leveraged **MongoDB's** aggregation framework for complex data transformations and analytics.
- Integrated Redux for efficient state management in **Next.js** applications.

- Created API routes in **Next.js** to handle server-side logic and act as a backend for the frontend application.
- Implemented client-side routing using **Next.js** built-in routing system, ensuring smooth page transitions and userfriendly navigation.
- Utilized **AJV** for JSON schema validation, ensuring data integrity and compliance with predefined schemas.
- Implemented end-to-end testing with **Cypress** to validate user flows and application performance.
- Designed and implemented scalable web applications using **Azure App Service**, ensuring high availability and performance.
- Developed serverless applications using **Azure Functions** for efficient and cost-effective solutions.
- Set up and maintained CI/CD pipelines using **Azure DevOps**, automating the deployment process to Azure services.

Environment: React Native, Redux, React Router, UI/UX, JavaScript, Next JS, Webpack, Websocket, Mongo DB, HTML, Tailwind CSS, Azure Devops, Cypress, Jest, Graph QL.

Project Name: Dicetek **(Nov 2023- April 2024)**

Client: - EMAAR PROPERTIES
Role: Senior Full Stack Developer

Responsibilities:

- Designing and implementing user interfaces using **React** to ensure a seamless and responsive user experience.
- Utilized state management libraries such as Redux in **React Native** to manage application state effectively.
- Optimized the performance of **React Native** applications by identifying and resolving bottlenecks, improving load times, and ensuring smooth animations.
- Worked closely with UX/UI designers and backend developers **on React Native** projects to deliver cohesive and functional applications.
- Conducted thorough testing using tools like **Jest** and Detox for **React Native** applications to ensure highquality, bug-free code.
- Implemented state management solutions like **NgRx in Angular** applications to manage application state and data flow effectively.
- Designed and constructed APIs in **Node.js**, exposing backend functionality with a focus on business logic and data access.
- Designed **Node.js** applications with scalability in mind, accommodating growing user bases and increased data loads.
- Collaborating with the backend team to integrate frontend components with the server-side APIs.
- Developed and executed scaling strategies for **MongoDB** clusters to handle increased data loads.
- Configured Babel to transpile modern **JavaScript** (ES6 and beyond) into backward-compatible code for wider browser support.
- Spearheaded the development of robust and interactive user interfaces for web applications using **Angular** framework.
- Employing **TypeScript** to enhance type safety and code maintainability in the development of React components.

- Integrating **MongoDB** as the database solution for storing and retrieving data efficiently.
- Developing and maintaining **GraphQL** APIs to enable seamless data retrieval and manipulation.
- Monitored and optimized cloud resources for performance and cost, leveraging AWS CloudWatch, Azure Monitor, and cost management tools.
- Worked in an **AWS** environment, utilizing various AWS services to deploy, manage, and scale applications in the cloud.
- Orchestrated the build process using **Webpack**, optimizing bundle size and improving application performance.

Environment: React Native, Typescript 3.3, HTML, CSS, Material UI, MongoDB, Webpack, Babel, SASS, AWS, GraphQL

Project Name: Lotto-Social **(April 2023-Oct 2023)**
Client: Hatchster LTD
Role: Sr React Native Developer

Responsibilities:

- Developed responsive and visually appealing web interfaces using HTML, CSS (including SCSS), and Bootstrap v.4.
- Created visually appealing and user-friendly interfaces using design software like Adobe XD and Marvel.
- Designed and integrated RESTful API endpoints in **React** to fetch and update data within web applications.
- Improved page load times and overall performance in **React Native** applications through efficient design, image optimization, and minimizing unnecessary assets.
- Integrated with REST and/or **GraphQL** services, ensuring seamless communication between the front-end and backend systems.
- Utilized state management libraries such as Redux in **React Native** to manage application state effectively.
- Optimized the performance of **React Native** applications by identifying and resolving bottlenecks, improving load times, and ensuring smooth animations.
- Worked closely with UX/UI designers and backend developers **on React Native** projects to deliver cohesive and functional applications.
- Conducted thorough testing using tools like **Jest** and Detox for **React Native** applications to ensure highquality, bug-free code.
- Applied website design systems from Figma, ensuring consistency and adherence to established design patterns across the application.
- Managed **Node.js** packages and dependencies using **NPM** (Node Package Manager).
- Implemented custom middleware in **Node.js** for request processing, authentication, logging, and error handling.
- Leveraged the asynchronous, event-driven nature of **Node.js** to handle multiple simultaneous connections.
- Conducted successful data migration projects, transferring data from legacy databases to **MongoDB.**
- Managed CI/CD pipelines for automated deployment using tools like AWS Code Pipeline.
- Wrote comprehensive unit tests using testing frameworks such as Jest and Enzyme (for React).

Environment: React Native, React JS, Redux, Graph QL, Node JS, Jest, Mocha Bootstrap V.4, AWS, Mongo DB, Javascript, HTML, CSS, AWS, UI/UX.

Client: E-solutions **(Nov 2022 – March 2023)**
Role: Full Stack Developer
Project Name: iVisit
An interactive platform to create & share 360° virtual tours. At iVisit, we are zealous about everything tech & innovation and enabling brands & SMEs to engage and convert targeted audiences via immersive 360 experiences.

Responsibilities:

- Developed server-side applications using Node.js and **TypeScript** for improved code maintainability and type safety.
- Utilized modern frontend development tools and stack, including **Node.js**, NPM, Gulp, Yarn, and Babel, to streamline development workflows.
- Figma designs and converting them into pixel perfect UI with **React.**
- Implemented **GraphQL** APIs within the **Next.js** application for seamless data communication.
- Integrated and configured Apollo Client on the client-side for efficient data fetching and state management.
- Developed and maintained server-side logic using **Node.js**, ensuring high performance and responsiveness for web applications.
- Developed custom middleware solutions in **Node.js** to handle authentication, authorization, and request processing.
- Spearheaded the design, development, and maintenance of **Node.js** applications, utilizing the **Express.js** framework for server-side logic.
- Implemented **Firebase** services to develop real-time applications, leveraging features such as authentication, storage, and hosting for seamless user experiences.
- Configured **Firebase** Cloud Messaging (FCM) to enable push notifications, enhancing user engagement and retention.
- Plan and architect complex **React** applications, making high-level decisions about the application's structure and ensuring that all elements work together seamlessly.
- Designed and styled web applications efficiently using the **Tailwind CSS** framework.
- Set up Babel for JSX and **React** components to enable their use in projects.
- Improved page load times and overall performance in **Node JS** applications through efficient design, image optimization, and minimizing unnecessary assets.
- Utilized **Express.js**, a popular **Node.js** framework, to streamline the development of web applications and APIs.
- Designing and implementing **GraphQL** schemas to facilitate efficient and flexible data querying.
- Collaborated with development teams to design and implement continuous integration and delivery (CI/CD) pipelines using **AWS** CodePipeline and Azure DevOps.
- Wrote unit and integration tests for Node.js and React applications using **Jest and Mocha**.

Environment: React Native, React, Redux, UI/UX, JavaScript, Node JS, Next JS, WebPack, Express JS, Mongo DB, HTML, Tailwind CSS, AWS, Graph QL

Client: Arab Millionaire **(Nov'2021 – Oct'2022)**
Role: Angular Developer
Project Name: Fooz
Fooz; play-to-win online platform introduced by Arab Millionaire, offering participants the chance to "Dream Big, Give More" with the largest prizes in the Arab World.

Responsibilities:

- Designing and implementing user interfaces using **React** to ensure a seamless and responsive user experience.
- Created robust and scalable mobile applications for both iOS and Android using **React Native**, ensuring a seamless user experience across platforms.
- Integrated RESTful APIs and third-party services using **React Native** to fetch and display dynamic data in the application.
- Designed and implemented reusable components in **React Native** to streamline development and maintain consistency throughout the application.
- Written well cleaned **React** components, services, directives.
- Collaborating with the backend team to integrate frontend components with the server-side APIs.
- Developed and executed scaling strategies for **MongoDB** clusters to handle increased data loads.
- Configured Babel to transpile modern **JavaScript** (ES6 and beyond) into backward-compatible code for wider browser support.
- Developed and maintained server-side logic using **Node.js**, ensuring high performance and responsiveness for web applications.
- Developed real-time applications using **Node.js**, leveraging frameworks for bidirectional communication
- Developed custom middleware solutions in **Node.js** to handle authentication, authorization, and request processing.
- Employing **TypeScript** to enhance type safety and code maintainability in the development of React components.
- Integrating **MongoDB** as the database solution for storing and retrieving data efficiently.
- Wrote unit and integration tests for **Node.js** and **React** applications using Jest and Mocha.
- Worked in an **AWS** environment, utilizing various AWS services to deploy, manage, and scale applications in the cloud.
- Orchestrated the build process using **Webpack**, optimizing bundle size and improving application performance.

Environment: React Native, React, Node JS, Redux, UI/UX, JavaScript, WebPack, Mongo DB, HTML, Tailwind CSS, Azure Devops.

Client: Hatchster Limited **(Feb 2017 – Nov 2021)**
Role: Sr. Software Developer
Project Name: Lotto-Social

Responsibilities:

- Developed server-side applications using Node.js and **TypeScript** for improved code maintainability and type safety.
- Utilized modern frontend development tools and stack, including **Node.js**, NPM, Gulp, Yarn, and Babel, to streamline development workflows.
- Figma designs and converting them into pixel perfect UI with **React.**
- Implemented **GraphQL** APIs within the **Next.js** application for seamless data communication.
- Integrated and configured Apollo Client on the client-side for efficient data fetching and state management.
- Developed and maintained server-side logic using **Node.js**, ensuring high performance and responsiveness for web applications.
- Developed custom middleware solutions in **Node.js** to handle authentication, authorization, and request processing.
- Spearheaded the design, development, and maintenance of **Node.js** applications, utilizing the **Express.js** framework for server-side logic.
- Implemented **Firebase** services to develop real-time applications, leveraging features such as authentication, storage, and hosting for seamless user experiences.
- Configured **Firebase** Cloud Messaging (FCM) to enable push notifications, enhancing user engagement and retention.
- Plan and architect complex **React** applications, making high-level decisions about the application's structure and ensuring that all elements work together seamlessly.
- Designed and styled web applications efficiently using the **Tailwind CSS** framework.
- Set up Babel for JSX and **React** components to enable their use in projects.
- Improved page load times and overall performance in **Node JS** applications through efficient design, image optimization, and minimizing unnecessary assets.
- Utilized **Express.js**, a popular **Node.js** framework, to streamline the development of web applications and APIs.
- Designing and implementing **GraphQL** schemas to facilitate efficient and flexible data querying.
- Collaborated with development teams to design and implement continuous integration and delivery (CI/CD) pipelines using **AWS** CodePipeline and Azure DevOps.
- Wrote unit and integration tests for Node.js and React applications using **Jest and Mocha**.

Environment: Node JS, Nest Js, React, React Native, TypeScript, Javascript, HTML, CSS, Mongo DB, CICD, Azure, Git, Docker.
