Experience

Software Development Engineer | *The HRAlly* | *Remote* **April 2025 - Present**

- Developed AI-powered HR chatbot with **natural language to SQL conversion** with Role-Based Access Control (RBAC) and **Redis caching** for real-time database queries and enabling users to access complex HR data independently.
- Built comprehensive **Xero API integration** for bidirectional payroll data synchronization, including employees, pay runs, and leave applications reducing payroll processing time by 80 percent.
- Developed and maintained **15+ Django modules** for end-to-end flow of HR management system spanning recruitment, payroll, attendance, leave, and asset tracking workflows.
- Deployed Django HR application to **AWS Elastic Beanstalk** with **AWS S3** static file storage, implementing automated deployment pipeline and environment configuration management.
- Built AI resume filtration module using **OpenAI, tiktoken for tokenization, and Django Celery background tasks**, creating an intelligent candidate screening system with **NLP**-based resume parsing, skill matching, and automated ranking algorithms, processing 500+ resumes daily

Software Development Engineer | *GeeksforGeeks*| *Noida* **Apr 2023 - Apr 2025**

- Developed and optimized scalable AI-powered backend services using **Django**, Python, and **LangChain**, integrating **NLP models (GPT, BERT)** to improve data retrieval by 30 percent
- Built and optimized Django REST APIs for AI-driven applications, reducing latency and improving response time.
- Designed and implemented high-performance backend data retrieval systems using **Django ORM**, **Elasticsearch**, **PostgreSQL**, and **AWS Lambda**, reducing query time by 40 percent.
- Developed and maintained user authentication **role-based access control** in Django to enhance security
- Integrated **Django Celery** for asynchronous task execution, enhancing system efficiency.
- Collaborated with cross-functional teams to define system architecture and align **RAG implementations** with business requirements.
- Implemented **Redis caching** and optimized Django ORM queries, reducing DB load and improving API response time by 35 percent.

Technical Skills

Languages: Python, SQL
Frameworks/Libraries: Django, Django REST Framework, LangChain, Celery, NumPy, Tensorflow
Databases: PostgreSQL, Redis, MySQL
Tools & Platforms: Git, GitHub, Postman, Docker, AWS (S3,Elastic Beanstalk)
AI/ML: NLP, LangChain, Fine-tuning, Hugging Face, Transformers, LLMs, RAG, Agentic RAG, Tokenization

Projects

Speech to Speech Model

- Developed a machine translation model for English to Hindi Translation using **PyTorch** and **Hugging Face's Transformer** Library .
- Utilized **Helsinki-NLP Opus- MT model** (pre-trained model) and tokenizer for sequence-to-sequence tasks
- Model attained a medium BLEU score of 0.406, indicating that the translations were close to the reference translations

Agentic RAG with Langchain and BM25 Retrieval

- Built a semantic search tool using **BM25Retriever** and **Langchain**, enhancing document retrieval from large text datasets
- Utilized **Hugging Face's Inference API** to deploy large language models for real-time text generation and question-answering tasks. '
- Created RetrieverTool and integrated smolagents to streamline interactions with models and improve query handling in AI workflows.

Education

Allenhouse Institute of Technology **CGPA: 9.0 / 10.00**
BTech(CSE) *Kanpur, UP*

Dr. Virendra Swarup Memorial Public School **Percentage: 83.00 / 100.00**
12th ISC *Kanpur, UP*
