Aryan Malviya

+917017776768 | aryanmalviya013@gmail.com | Noida, India

Summary

Associate Data Scientist with hands-on experience in Generative AI, RAG pipelines, and Agentic AI workflows. Skilled in deploying LLM-powered solutions that reduce manual workloads and improve decision-making. Proficient in Python, SQL, and Azure AI Services, with proven ability to translate business needs into scalable AI solutions and deliver measurable impact.

Education

SRM Institute Of Science & Technology | Chennai, Tamil Nadu
B.Tech in Computer Science and Engineering | 06/2024

Experience

Glorious Insight | Noida, Uttar Pradesh
Data Science Associate | 09/2024 - 09/2025

- Designed and implemented RAG pipelines using LangChain and Azure AI Search to enable intelligent document retrieval for business teams.
- Built an Agentic AI workflow to automate multi-step reasoning tasks for customer support, reducing manual resolution time.
- Collaborated with cross-functional teams to translate business needs into analytics solutions, influencing strategic decisions.
- Synthesized and presented data-driven recommendations to stakeholders with clarity and impact.
- Translated business requirements into analytics solutions, collaborating closely with stakeholders and domain experts.
- Operationalized models into production using APIs and automation workflows; ensured robust testing and documentation

Glorious Insight | Noida, Uttar Pradesh
Data Science Intern | 04/2024 - 09/2024

- Assisted in implementing retrieval-augmented generation (RAG) pipelines for internal knowledge systems, combining vector databases with transformer models.
- Created custom prompt engineering strategies to improve LLM accuracy and context relevance by.
- Built predictive models to improve decision-making efficiency and business planning.

Skills

- Languages: Python, SQL
- Libraries/Frameworks: LangChain, Hugging Face, Flask, NumPy, Pandas, Matplotlib, Seaborn,
- AI & Machine Learning Skills: Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Transformers, Prompt Engineering, Agentic AI
- Tools: GitHub, Jupyter Notebook, VS Code, Excel
- Databases: MySQL
- Cloud Platforms: Microsoft Azure (Azure AI Services)

Projects

1. **RAG-based Chatbot** (LLM, Vector DB, LangChain, Docker)

- Built an on-premises RAG chatbot by integrating Azure Form Recognizer for PDF text extraction and Qdrant for vector search.
- Implemented BGE embeddings with LangChain to orchestrate context-aware response generation using LLaMA 3.1.
- Deployed within Docker containers to ensure complete local operability.

2. **Intelligent Document Processing & Evaluation Tool** (Azure Form Recognizer, OpenAI, Streamlit, Python)

- Developed an AI-powered document evaluation pipeline combining Azure Form Recognizer for PDF text extraction and OpenAI models for semantic analysis and scoring.

- Built a Streamlit-based user interface to allow real-time document inspection, review, and evaluation before final submission.
- Implemented automated content validation workflows to check compliance, completeness, and formatting consistency.
- Enabled faster and more accurate evaluation of structured and unstructured documents, reducing manual review time.

3. **Customer Support Ticket Intelligence System** (SQL, Python, LLM)
   - Developed a support ticket classification pipeline using Python and GROQ AI's LLM API to automatically tag and prioritize incoming customer queries.
   - Integrated SQL to extract and preprocess historical ticket data from a customer service database.
   - Designed a feedback loop to improve the model using human-in-the-loop validation, increasing tagging accuracy.
   - Enabled faster ticket resolution and smarter escalation workflows, reducing average response time.
