SUMMARY

AI Engineer | Automation & Agentic AI Systems
AI Engineer specializing in **AI-driven automation, LLM orchestration,** and **backend systems.** Experienced in building and deploying **agent-based AI workflows** using **Python, LangChain, n8n,** and **REST APIs.** Hands-on experience deploying AI services on **AWS (EC2, S3),** designing secure **OAuth/JWT-based systems,** and integrating **LLMs into real business operations.** Strong focus on **production-ready AI systems, automation reliability,** and **scalable API-driven architectures.**

WORK EXPERIENCE

AI Engineer | 1to10x **Apr 2025 – Present**

- Designed and deployed **AI-powered automation systems** using **LangChain, OpenAI APIs,** and **n8n** to orchestrate **multi-step agent workflows.**
- Built **backend** services exposing **REST APIs** for AI agents, secured using **OAuth 2.0** and **JWT-based authentication.**
- Deployed AI services on **AWS EC2** with **Nginx** as a **reverse proxy,** handling webhook traffic and external integrations.
- Built an internal **CLI-driven AI execution system** for OpenAnalyst, including a **backend service** and **agent orchestrator** to route tasks through structured, **API-first workflows.**
- Implemented **Model Control Protocols (MCPs)** to enable **structured communication** between autonomous AI agents across tools and platforms.
- Reduced **manual operational** effort by **automating recurring AI-driven workflows** through **agent orchestration** and **backend services**

Robot Wallah – Associate AI Engineer **Mar 2024 - Apr 2025**

- Designed and implemented **end-to-end automation systems** integrating **embedded hardware, sensors,** and **backend analytics platforms.**
- Built **data ingestion and processing workflows** to transform raw system data into **actionable insights**.
- Developed **backend logic and automation scripts** to collect, process, and visualize data from **distributed systems.**

Projects

Circle MCP (Link)

- Built a **production-grade MCP server** enabling AI assistants **(Claude, VS Code Cline)** to securely interact with **Circle.so** communities.
- Implemented **Google OAuth 2.0, JWT authentication, rate limiting,** and **retry logic.**
- Designed a modular **API architecture** supporting **20+ AI tools** for community operations.
- Deployed and integrated the MCP server with AI clients for **real-time automated actions.**

Cloud & Infrastructure

- Deployed AI backend services on **AWS EC2 (Ubuntu Linux).**
- Used **AWS S3** for storing AI-generated outputs, logs, and workflow artifacts.
- Configured **Nginx** as a **reverse proxy** for API services and webhook endpoints.
- Managed **environment variables** and **secrets** for LLM APIs and OAuth credentials.
- Worked with **public/private IPs, ports,** and **security groups** for controlled access

CORE SKILLS

AI & LLM System: LangChain, Agentic AI, MCP, Prompt Engineering & Tool Calling, OpenAI / Gemini APIs, Autonomous Agents
Automation & Integration: n8n, Zapier, make, Webhooks, API Orchestration, Workflow Automation
Backend & APIs: Python, Django, REST APIs, FASTAPI, OAuth 2.0, JWT Authentication
Cloud & DevOps: AWS EC2, AWS S3, Linux (Ubuntu), Nginx
Databases: MySQL, Supabase, Mongo DB
Hardware & IoT (Secondary): Arduino, ESP Boards, Raspberry Pi, Sensors & Actuators

EDUCATION

Institute of Management Studies, Ghaziabad 2021-2024
Bachelor of Computer Application

CERTIFICATIONS

- **Databases and SQL for Data Science with Python – IBM (via Coursera)**
- **Machine Learning with Python – IBM (via Coursera)**
