Job Title	: **Senior Associate** – **IT Operations**
Reports to	: Director IT Services – India
Location	: Mumbai (BKC)

JOB OVERVIEW

The position of Senior Associate is responsible for overseeing various aspects of IT Operations and coordinating with stakeholders such as the Server and Network Administrator, End User Support team, and other departments to address IT needs and requirements.

ESSENTIAL DUTIES AND RESPONSIBILITIES

- Assist the **Network** Administrator in maintaining and troubleshooting the organization's data and voice network infrastructure—across both on-premises and cloud environments—to ensure optimal performance and security of all network components.
- Assist the **System** Administrator in managing Windows and Linux servers—across on-premises, cloud, and virtualized environments (including Nutanix and VMware)—to ensure optimal performance and availability.
- Assist in delivering **IT services to end users** by resolving operational bottlenecks, maintaining regular communication with stakeholders, and supporting the achievement of SLAs and TATs with business partners and vendors.
- Assist in managing the **IT asset lifecycle**, including budgeting, procurement, deployment, regular maintenance, and secure disposals.
- Collaborate with the global Information Security team and internal IT groups to implement best practices, align local processes with global security policies, and continuously enhance the organization's **security posture**.
- Support **various departmental IT operational needs** by coordinating and assisting with ad hoc requirements such as town halls, trainings, and other organizational events and needs

TECHNICAL COMPETENCIES (Knowledge, Skills & Abilities)

- Good understanding of networking protocols (TCP/IP, DNS, DHCP, etc.) and experience of working on switches, routers, firewall and wireless devices.
- Good understanding and hands-on experience with Windows and Linux operating systems and virtualization platforms like VMware or Nutanix. Knowledge of cloud platforms (Azure, AWS) is an advantage.
- Good understanding of ITIL frameworks.
- Familiarity with vulnerability scanning tools and incident response frameworks.

EDUCATION AND EXPERIENCE

- Any Bachelor's degree with 7-10 years of relevant experience.
- Certifications such as CCNA, AWS, Azure, Windows, Linux, ITIL will be an advantage..
