KRISHAN KANT

Mumbai ,INDIA | www.greatsiteaddress.com
+91-7718834073| name.equal.krish@gmail.com

Strategic and innovative Application Architect with deep expertise in enterprise architecture frameworks, cloud-native transformations, and AI-driven modernization within the BFSI domain. Adept at architecting scalable, secure, and compliant solutions that streamline core banking operations, optimize data governance, and accelerate digital transformation. Proven ability to leverage microservices, API ecosystems, and event-driven architectures to drive agility and operational excellence across retail, corporate, and investment banking verticals. Passionate about bridging business and technology through architecture governance, cloud migration strategies, and cutting-edge fintech integrations to empower next-generation banking platforms.

ROLES AND EXPERTISE

Role Summary:
Architected secure, scalable, and high-performance applications for banking and financial services, ensuring compliance with industry standards and seamless integration with enterprise platforms.

Key Responsibilities:

- Designed and maintained enterprise architecture frameworks to support digital banking, core banking modernization, and financial product innovation.
- Aligned IT strategy with regulatory requirements (e.g., RBI, SEBI, etc) and business objectives across retail, corporate, and investment banking divisions.
- Developed target-state architectures for digital platforms, core banking systems, risk management, and omnichannel customer engagement.
- Evaluated and integrated enterprise platforms such as Temenos, Finacle, Oracle Financial Services, and SAP Pioneer.
- Guided cloud adoption (e.g., AWS, Azure) and API-led integration for banking ecosystems including fintech partnerships.
- Oversaw governance frameworks to ensure architecture consistency, risk mitigation, and cybersecurity across critical financial applications.
- Evaluated tools and platforms such as Finacle, TCS BaNCS, Salesforce Financial Services Cloud, and Mambu for digital banking solutions.
- Partnered with DevOps teams to automate deployments, testing, and CI/CD pipelines across cloud and on-premise environments.
- Defined coding standards, reusable components, and design patterns tailored to financial services applications.
- Collaborated with risk, compliance, and cyber security teams to embed controls and auditability into application design.
- Led architectural assessments for core system upgrades, mergers & acquisitions, and regulatory audits.
- Collaborated with business leaders and technology teams to drive enterprise capability maturity and innovation in services like e-KYC, UPI, and real-time payments.
- Established architectural governance boards and review processes for change management and IT alignment.

Experience

ENTERPRISE ARCHITECT

Deloitte LLP [June 2023 - Present]

Client - State Bank of India | Mumbai, India

2024 - PRESENT

Serving as a strategic Application Architect for State Bank of India, providing end-to-end technical leadership and architectural direction for modernizing core and peripheral banking applications. Spearheaded the design and implementation of scalable, secure, and resilient application architectures, with a focus on AI-driven modernization, system interoperability, and cloud-readiness. Responsible for architectural reviews, design validation, and defining modernization roadmaps aligned with the bank's digital transformation goals. Created detailed architectural documentation, proof of concepts (PoCs), and technical feasibility assessments to evaluate emerging technologies. Developed SOPs, reusable frameworks, and best practice guidelines to ensure consistency, regulatory compliance, and maintainability across projects. Worked cross-functionally with development, security, DevOps, and business teams to drive innovation while ensuring adherence to performance, security, and governance standards.

SOLUTION ARCHITECT

Client - Vodafone Global | Pune, India

2023 - 2024

Designed and architected Price Manager, a modular application for managing and regulating asset pricing across Vodafone’s global operations. Built on AWS using services like EC2, S3, Lambda, and RDS, ensuring scalability and integration with both internal and external systems. Enabled real-time monitoring and performance optimization through Dynatrace. Focused on modularity, interoperability, and maintainability to support dynamic pricing and global asset governance.

Enterprise ARCHITECT

TCS [Dec 2021 – June 2023]

Client - Royal Bank of Canada | Mumbai, India

2021-2023

Contributed to the customization and modular development of the Collibra Data Governance Platform, enabling a centralized view of business-critical data assets, including domains, metrics, APIs, models, and data products. Developed the Payment Module using Angular 8, CSS, JavaScript, and TypeScript for front-end enhancements. On the backend, implemented functionality using Spring MVC, Spring Batch, and a standalone Spring Boot reporting tool. Supported the creation of custom asset types, rules, domains, and user profiles based on business requirements. Led efforts in cloud migration to Google Cloud Platform (GCP) and deployed services using Kubernetes, ensuring scalability and alignment with client infrastructure strategies.

TECHNOLOGY LEAD

Capgemini [Nov 2016 – Dec 2021]

Client - DTCC, Guardian | Mumbai, India

2016-2021

Worked on GPAC, a cloud-based policy administration system for managing Whole and Term Life insurance policies, enabling agents to view and process detailed policy information. Migrated the application from Java 7 to Java 8, used Hibernate with DB2/Oracle, and deployed via Jenkins in AWS with monitoring through Splunk.
Also developed BigFish, an automated trade reporting system for DTCC GTR, handling global trade data using Angular 4, Spring Boot, Struts, and Hibernate. Focused on multithreading, RESTful APIs, and automated reporting. Ensured high performance, regulatory compliance, and seamless vendor integration.

Sr. Software Developer

Mphasis [Apr 2014 – Apr 2016]

Client - JP Morgan Chase | Mumbai, India

2014 - 2016

As Full stack java developer, I worked on application known as RDMS (Resilience Data Management System). This application deals with the data and role management for JPMC employees for critical applications data. Technical stack for the application includes Primefaces, struts 3.x, Java 7, spring MVC, spring batch, cognos, Jenkins, Mokito.

EDUCATION

PGDM – INFORMATION TECHNOLOGY

Welingkar institute of management, Mumbai

Oct 2017 – Oct 2019

BACHELOR OF ENGINEERING

University of Pune, Pune

June 2009 – Aug 2013

H.S.C – C.B.S.E

Kendriya Vidyalaya No 1, AirForce Stn, J&K

Oct 2008 – Oct 2009

S.S.C – C.B.S.E

Kendriya Vidyalaya No 1, AirForce Stn, J&K

June 2006 – Aug 2007

SKILLS

- Solution Design & Architecture
- Architecture Governance & Compliance
- Stakeholder Management
- Business Process Improvement, re-engineering & design
- MS visio, Lucidchart, UiPath, ArchiMedes
- Change Management
- JIRA, Scrum process

- **FrontEnd** – Angular 17, primefaces, Nodejs, javascript
- **BackEnd** – Java 8/11/17, spring framework, spring MVC, Spring boot, spring batch, Multi threading, Restful webservices
- **Database/ORM** – Oracle, DB2, Sql Server, Shell scripting, Websphere, Tomcat server 9 , python 3, Hibernate
- **OS** – MS window, Linux, Ubuntu
