Profile Summary

Market Risk, Quantitative Analytics & Model Validation Professional
National Australia Bank (NAB), Gurugram | Clearing Corporation of India (CCIL), Mumbai

- Finance and risk professional with 7+ years of experience across global banking and CCP environments, specializing in market risk model validation, quantitative analytics, regulatory risk frameworks and valuation methodologies.
- Strong understanding of financial products across Fixed Income, FX, Interest Rate Swaps, FRA, Currency Options, Bond Forwards, Repo, and Futures, covering model lifecycle from valuation, volatility construction, stress testing, sensitivities, hedge accounting and regulatory validation.
- Experienced in quantitative modelling and analytics including VaR, stress testing, scenario generation, volatility surface bootstrapping, time-series modelling, regression analysis and Monte Carlo simulations, supported by hands-on implementation using Excel, Python and R.
- Proven ability to bridge risk, analytics, technology, and business teams through model validation, stakeholder engagement, documentation, UAT leadership, and controlled implementation across global risk environments.
- Comfortable working across distributed teams, cross-region stakeholders and remote collaboration models within fast-paced market risk functions.

Experience

National Australia Bank (NAB)
Mar 2026 – Present – Assistant Vice President (AVP) – Market Risk Model Validation

- Conduct model validation for market risk methodologies covering FRA products across global regions and multi-currency portfolios.
- Validate volatility surface bootstrapping methodologies for cap/floor and caplet models across multiple currencies and markets.
- Support hedge accounting validation and fair value adjustment assessment impacting balance sheet valuation and risk representation.
- Partner with quantitative, technology, and global risk teams while exploring AI-led workflow enhancements for model validation processes.

Application – R, Python, Market Risk Platforms (Calypso/Murex)
Environment – Market Risk Model Validation & Quantitative Analytics

Clearing Corporation of India (CCIL)
Jun 2022 – Feb 2026 – Deputy Manager-II – Market Risk

- Designed and enhanced stress testing and scenario generation frameworks for regulatory and internal risk assessment across market, liquidity, and concentration risks.
- Developed VaR and margin stress scenarios using historical, Monte Carlo, and extreme value–based approaches supported by time-series modelling and volatility analytics.
- Built challenger valuation models for FX Options in R and Python, validating MTM, Greeks, sensitivities, and pricing accuracy against production systems.
- Led end-to-end research, development, and UAT for valuation, MTM, margin, and stress testing models, including requirements definition, test design, defect resolution and production sign-off.
- Acted as Business Analyst / Product Owner for risk platforms covering FX, IRS, Bonds, Repo, and Options, developing strong understanding of risk processes and system workflows.
- Coordinated default management drills and supported regulatory research aligned with PFMI principles, IOSCO-CPMI guidance, and peer CCP practices.

Application – R, Python, Excel, Margining, Trading and Reporting Platforms
Environment – Risk management, Analytics and Regulatory Compliance

State Bank of India
Jan 2019 – May 2022 – Deputy Manager

- Managed and evaluated credit, market, and liquidity risk across domestic and international portfolios aligned with RBI regulations.
- Performed financial statement analysis, cash-flow assessment, and credit modelling to support limit setting and risk rating decisions.
- Supported trade finance operations involving Letters of Credit, Bank Guarantees, and Exim Bills, gaining strong understanding of banking products and operational workflows.
- Assisted in process documentation, control checks, audit responses, and compliance monitoring, supporting internal and regulatory reviews.
- Acted as coordination point between operations, compliance, and management for issue resolution and process improvement.

Application – Credit Analysis and Trade Finance Systems
Environment – Banking Risk, Operations and Compliance
