Mansi Ahlawat

DevOps Engineer
Bachelor of Technology - CSE

Ph +91-9068289441
Email: mansi.ahlawat0102@gmail.com
LinkedIn: LinkedIn

Summary

DevOps Engineer with 4+ years of experience in building and managing **CI/CD automation**, **Infrastructure as Code (IaC)**, and cloud-native deployments on AWS for **Fintech environments**. Proficient in Kubernetes orchestration and observability stacks using **Prometheus, Grafana, and ELK**. Experienced in cloud **cost optimization** and improving platform reliability.

Technical Skills and Interests

Languages: Python, Bash
Cloud Platforms: AWS (EKS, EC2, RDS, S3, IAM, Batch Job, SES, SQS, SNS etc.)
Containerization and Orchestration: Docker, Docker Compose, Kubernetes, Helm, KEDA
IaC Tool: Terraform
CI/CD: Jenkins, ArgoCD, Bitbucket Pipeline
Observability: Prometheus, Grafana, Loki, ELK
Databases: MongoDB, MySQL, PostgreSQL

Experience

•Easebuzz Pvt. Ltd. (Fintech) - Full Time *July 2025 - Present*
DevOps Engineer Hybrid

- **uWSGI Metrics Exporter & Autoscaling:** Developed a custom uWSGI exporter and deployed it as a sidecar container to expose RPS metrics to Prometheus, enabling KEDA-based autoscaling.
- **Observability with ADOT:** Implemented AWS Distro for OpenTelemetry (ADOT) to collect, process, and export metrics, logs, and traces, improving observability across applications and infrastructure.
- **Identity & Access Management (SSO):** Configured Keycloak and integrated it with Jenkins, ArgoCD, and Rancher to enable Single Sign-On (SSO), improving security posture and access governance.
- **Helm Standardization:** Onboarded Kubernetes applications to Helm charts across development and production environments, standardizing deployments and improving release reliability through IaC-driven configuration management.
- **Jenkins Upgrade & Migration:** Migrated and upgraded Jenkins along with the underlying Ubuntu OS, improving system security, compatibility, and overall stability.

•Unthinkable Solutions - Full Time *Nov 2021 - June 2025*
DevOps Engineer Hybrid

- **Containerized Applications Deployment:** Spearheaded end-to-end deployment of containerized applications using Kubernetes on AWS EKS, leveraging Helm charts and Kubernetes best practices.
- **Infrastructure and Cloud Migration:** Successfully led the migration of infrastructure from Digital Ocean to AWS EKS, optimizing microservice deployments and improving scalability using Terraform.
- **CI/CD Pipeline Management:** Built and maintained CI/CD pipelines using Jenkins and ArgoCD.
- **Observability & Monitoring:** Deployed full observability stack — ELK (Logstash, Filebeat, Kibana), Prometheus, Grafana, and New Relic — for centralized logging, metrics, and alerting across all environments.
- **Autoscaling & Reliability:** Implemented HPA and Cluster Autoscaler for dynamic Kubernetes scaling.
- **Cost Optimization:** Designed AWS cost optimization strategies through right-sizing, efficient provisioning, and resource monitoring — achieving measurable reduction in operational cloud spend.
- **Configuration Management:** Utilized Ansible to automate software provisioning and configuration of managed nodes, including security scan reporting.

Projects

•Automated CI/CD Tool Creation
Jenkins, AWS EKS, Prometheus, Grafana, Kubernetes, Terraform

- Designed a CI/CD automation tool that provisioned Jenkins pipelines, Kubernetes deployments on AWS EKS, and a full observability stack (Prometheus + Grafana) in two single-click steps — eliminating manual setup and reducing deployment time significantly.
- Applied IaC principles to eliminate configuration drift; simplified the deployment workflow enough for non-DevOps teams to trigger releases independently.

Education

•Bachelor of Technology in Computer Science and Engineering *2018 - 2022*
Meerut Institute of Engineering and Technology AKTU University
