mayuri15jan@gmail.com

9372682614

Mumbai Maharashtra

Skills

- **Version control systems - Git,SVN,GitHub,CVS,BitBucket**
- **Technical documentation writing- Confluence,DropBox, GoogleDocs**
- **Project Management Tools - Asana,Jira**
- **Test case development - JUnit,Mockito,Espresso**
- **Language :- Dart,Java,Kotlin,Javascript**
- **Architecture: MVC,MVVM,MVP**
- **Technologies :- Flutter,React Native, Android ,Xamarin**
- **Design- Figma,Zepplin,Balsamiq**
- **Database- MySQL, MongoDB,Realm,SQlite**
- **Security: Proguard , SSL Certificate , Shared Preferences**
- **Third Party Library-Volley, Retrofit , Gson , Glide ,Google Analytics and Crashlytics, Firebase cloud Messaging, Room Persistent Library, Android Support Library,ButterKnife.**
- **Jetpack Component- Room,WorkManager,Lifecycle, Data,Navigation,Paging,DataBinding,Jetpack Compose.**
- **Dependency Injection - Dagger 2, Hilt**
- **Development Tools: Visual Studio Code, Android Studio, Xcode**
- **React Native: Mobile development for iOS and Android**
- **State Management: Redux, React Context API**
- **Libraries & Tools: Axios, React Navigation, NativeBase, Expo**
- **APIs: RESTful APIs, Firebase.**
- **CI/CD: Jenkins, GitLab CI**

Mayuri Khandelwal

Summary

Seasoned Android Developer/React Native Developer with comprehensive background in full life cycle of Android application development, including designing, coding, testing, debugging and maintenance. Possess strong skills in Java, Kotlin and SQL along with deep understanding of Restful APIs and modern architectural patterns. Proven ability to lead teams and projects to successful completion while maintaining high standards of code quality and meeting deadlines. Previous work has resulted in enhanced app performance, improved user experience and increased overall product efficiency.

Work Experience

RoboSoft Technologies Private Limited - Sr.Android Developer/React Native Developer
Mumbai, India
01/2022 - 05/2023

- **BSI Apollo Connect Entropy (Xamarin)** is a UK-based project used by auditors while auditing. With this, they can perform certain actions while performing the audit, both offline and online, according to their requirements. It is an app that allows auditors to take actions and raise flags regarding the requirements.
- **Health and Glow App (React Native Platform):** Developed and maintained multiple cross-platform mobile applications using React Native, improving app performance by 40%. Integrated third-party libraries for payment gateways, maps, and analytics to enhance user experience. Utilized Redux for state management, ensuring seamless data flow and improving app stability. Collaborated with UI/UX designers to ensure pixel-perfect designs were implemented for both iOS and Android. Performed API integrations, ensuring secure and efficient data exchange between the app and back-end serve. Worked with native code to resolve platform-specific issues and integrated native modules for camera and location services. Led a team of 3 developers in building a beauty and skincare e-commerce app, resulting in a 30% increase in customer engagement. Optimized app performance by reducing load times and ensuring smooth animations and transitions. Designed and implemented a **Mobile Micro Frontend architecture** to allow independent teams to develop and deploy modular features. Led the migration to a **Super App architecture**, integrating multiple mini-apps (wallet, travel, rewards) under a single shell app. Enabled dynamic feature loading and isolated CI/CD pipelines per module to ensure seamless updates and faster go-to-market.

Winvesta India Technologies Pvt. Ltd - Sr.Android Developer/React Native Developer
Mumbai, India
03/2020 - 03/2021
React Native: *Used to build a cross-platform mobile app for both iOS and Android, providing seamless performance across devices.* ***Redux:*** *Managed global state for features like flags, audit data, and user settings, ensuring that the app worked efficiently even in offline scenarios.* ***SQLite:*** *Utilized for local storage, allowing the app to function offline and store data persistently until it could be synced with the cloud.* ***Firebase:*** *Employed for* ***user authentication*** *and* ***real-time data sync****, enabling secure and seamless cloud storage.* ***Axios:*** *Used for API communication with the backend to fetch audit data, manage user profiles, and sync audit findings.* ***Jest:*** *Conducted* ***unit testing*** *and* ***end-to-end testing*** *to ensure a bug-free and reliable app. Designed and implemented a* ***Mobile Micro Frontend architecture*** *to allow*

Education And Training

06/2013
Master of Computer Applications:
IPS College
Indore MP
06/2010
Bachelor of Computer Applications:
Shri Vaishnav Institute Of Management And Science
Indore, MP

Websites, Portfolios, Profiles

- linkedin.com/in/mayuri15jan
- github.com/mayuri

Certifications

- **React Native, Completed Professional Certification Course of React Native from Coursera. 02/2024-04/2024**
- **Flutter, Completed the Professional Certification Course of Flutter from Udemy. 04/2024-08/2024**

*independent teams to develop and deploy modular features. Led the migration to a **Super App architecture**, integrating multiple mini-apps (wallet, travel, rewards) under a single shell app. Enabled dynamic feature loading and isolated **CI/CD pipelines** per module to ensure seamless updates and faster go-to-market.*

Eps Infotech - Sr.Android Developer
Indore, India
07/2013 - 01/2019

- **Oye24 (Customer App):** Oye24 is an online food and beverage company that provides food 24x7 to the customer. It is an app used by customers for regular activities such as ordering food, making payments, tracking location, order history, profile creation, and registration, etc. Customers also have the facility to book as well as takeaway their order. In this project, I worked on different modules from scratch like payment, profile creation, registration, OTP, notification, order history, and showing the product.
- **Oye24 (Delivery Boy):** The Oye24 delivery boy app is used by delivery boys for receiving and closing orders. It is an app used by delivery boys to receive new orders, close orders, and receive payment using cash mode or by debit card, and UPI mode from customers at the time of closing the order. I developed this app from scratch and also managed a team of 8-9 people, coordinated with the cross-functional team, reported bugs to QA teams, and released the production build on the Play Store.
- **Shop Kirana(Xamarin):-** This app is basically used for purchasing Kirana products. It's used by retailers and distributors. All the functionality of the payment process is proceeding by the.net server, not by the Payment Integration server. The customer has full-fledged functionality to add multiple products, remove and register, and create a profile.
  Xamarin.Forms: This is likely the framework used for building the UI in a cross-platform manner for both iOS and Android. Xamarin.Forms would allow you to share code and UI components across platforms, streamlining development.
  Xamarin.Native (iOS & Android): If more advanced or platform-specific functionality is needed (e.g., native look and feel), Xamarin.Native would have been used to customize the app for each platform.
  Local Database: The app could use **SQLite** for storing product information and user profiles locally, allowing users to access their data offline before syncing with the backend server.
  Custom Payment API: Since payments are handled through the .NET server rather than a third-party payment gateway, your app would send payment details (like amount, user info, etc.) to your **.NET API**, which processes and interacts with the payment infrastructure (e.g., through custom API calls to payment providers, bank systems, etc.).
  Notifications: Push notifications can be used to alert users about order status updates, payment success/failure, promotions, or restocks. For this, you might use **Firebase Cloud Messaging (FCM)** or **Azure Notification Hub**.
  Cloud Storage: Images of products or receipts could be stored in cloud storage (e.g., **Azure Blob Storage** or **Amazon S3**).
  Synchronization: Data syncing between the mobile app and the backend server would be crucial for ensuring that products, profiles, and order histories are consistent.
- **Customer Verification App (CPV)(Xamarin):** It is an in-house app used by the executives of the telecom companies. I had worked on this from scratch. The core concept of this app is to verify the customer's identity when they purchase the SIM, like document verification, address proof, and biometrics. This is all done with the help of this app. There is also a feature of a questionnaire regarding the background verification process.
  Security: Handling sensitive customer data like IDs, addresses, and biometric

information requires strict security protocols.
Cross-Platform Compatibility: Ensuring the app functions smoothly across both Android and iOS devices.
Integration with Telecom Systems: I have integrated the app with backend systems that validate the documents and biometric data against a central database.
Simple, Clear UI (User Interface)
Xamarin.Forms would be used to create a unified UI for iOS and Android, with some platform-specific customizations where needed.
Forms and Pages would be clean, with a consistent layout for each step of the verification process (e.g., Document Verification → Address Proof → Biometric Authentication).
Responsive design: Ensuring that the layout adapts well to different screen sizes, especially given the need to use the camera or biometric sensors.

- **Prizm Kiosk New:** This app is basically used for Telecom Company Airtel. It's used for recharge of Prepaid, Postpaid, and DTH of various companies. It also keeps track record of all the transactions done by the customer and also knowing about the status of that transaction. It also has the functionality of getting the transaction slip of recharge using Bluetooth functionality.

Accomplishments

- **Developed and launched a new Android application that increased user engagement by 25% and generated 100,000+ downloads within the first year.**
- **Troubleshot and resolved application issues, resulting in a 25% reduction in customer complaints and a 15% increase in customer satisfaction scores.**
- **Researched and implemented new technologies to enhance Android applications, resulting in a 30% increase in application speed and a 20% reduction in crashes.**
- **Collaborated with product owners and designers to create a user-friendly interface that resulted in a 15% increase in user satisfaction scores.**
- **Integrated with web services and APIs to improve application performance, resulting in a 40% reduction in load times and a 25% increase in user retention rates.**

Career Break **(May 2023 - Present)**

- Took time off for personal development and to attend family commitments.
- Engaged in self-directed learning and gained skills in React Native and Flutter apart from that also Did Personal and Freelance Project which I had mentioned below.

Code Vipasana Season 11

Completed: [09, 2025]

- Participated in an advanced, community-driven bootcamp focused on cutting-edge developments in cloud computing and AI tooling.
- Covered high-impact topics including **Gemini CLI**, **agent-based tools**, and real-world AI integration workflows.
- **Key Takeaway:** Deep dive into **Gemini CLI** — explored practical applications, command-line interfacing with AI models, and automation using Google Cloud's Gemini ecosystem.
- Gained hands-on experience through guided labs, discussions, and projects related to AI workflows and toolchain optimization.

Code Vipasana Season 10 – AI Agents & Data-Driven Workflows

Completed: [06, 2025]

- In-depth exploration of **data-driven AI agents** using **cloud databases**, **serverless runtimes**, and **open-source frameworks**.
- Designed and deployed intelligent agents capable of dynamic decision-making and cloud-native execution.
- **Key Takeaway:** Built scalable, serverless AI agent systems integrated with cloud-hosted data layers and open-source tooling.

Freelance Project:

Restaurant Ordering System: Developed a mobile app for restaurant customers to view menus, place orders, and track deliveries. Integrated Razor Pay API for payment processing and used React Navigation for a seamless user experience.

Duration – Nov 2023 – Presently Working

Personal Projects:

Fitness Tracker App: Built a cross-platform fitness tracking app using React Native and Redux. Implemented user authentication with Firebase and integrated Google Fit and Apple HealthKit for syncing fitness data.

Duration – May 2023 – Nov 2023
