6.5+	20M+	150+	40%	60%
Years of Experience	Records Analysed	Business Users Served	Performance Gains Delivered	Manual Effort Eliminated

PROFESSIONAL SUMMARY

Power BI Developer and Data Visualization Analyst with 6.5+ years of experience owning end-to-end data visualization initiatives — from data modelling and advanced DAX development to dashboard design, AI-powered insights, and stakeholder reporting. Expert in transforming complex datasets into intuitive, high-performance dashboards with strong UX, including Power BI Mobile implementations. Deep proficiency in advanced DAX (time intelligence, complex measures, performance optimization), SQL (joins, CTEs, window functions, query tuning), and schema design. Proven ability to investigate data discrepancies, identify root causes of quality issues, and collaborate cross-functionally to ensure accuracy and reliability. Experienced in leveraging Generative AI tools to automate insight generation, build AI narrative summaries, and enhance analytical productivity. Familiar with Figma for dashboard wireframing and prototyping prior to development. Track record of serving 150+ business users, reducing report refresh time by 40%, and eliminating 60%+ manual effort across enterprise BI environments.

CORE SKILLS & TECHNICAL EXPERTISE

BI & Visualisation	Power BI (Advanced DAX, Composite Models, RLS, Incremental Refresh, Power BI Mobile, AI Narratives, Smart Summaries, Copilot), Dashboard Design & UX, Tableau, Excel (Power Query, Power Pivot)
SQL & Databases	SQL Server, Snowflake, PostgreSQL, MySQL, Advanced Queries, CTEs, Window Functions, Stored Procedures, Query Optimisation, Indexing
Python & R	Pandas, NumPy, Matplotlib, Seaborn — EDA, Data Wrangling, Statistical Analysis, Trend Analysis, Reporting Automation
ETL & Data Workflows	Azure Data Factory (ADF), Power Automate, ETL Workflows, Incremental Load, Data Cleansing & Transformation, Data Wrangling, Star Schema, Medallion Architecture
Cloud Platforms	Microsoft Azure (Data Lake, Synapse Analytics, ADF), Snowflake, SharePoint, Microsoft Fabric (Lakehouse / OneLake)
Data Governance	Data Quality Investigation & Root Cause Analysis, Row-Level Security (RLS), RBAC, Data Quality Frameworks, Metric Documentation, Transformation Rule Governance, GDPR-aware Design
AI & Viz Design	AI-Powered Insights & Narratives, Generative AI Tools (Copilot, ChatGPT), Figma (Dashboard Wireframing & Prototyping), Automated Insight Generation, KPI Framework Design, Dashboard Governance
Data Documentation & Metric Governance	Metric Definitions & Assumptions Documentation, Transformation Rule Transparency, Data Logic Documentation, Dashboard Version Control, Analytics Standards & Governance Frameworks
Agile & Project Mgmt	Agile/Scrum Methodology, JIRA, Confluence, Sprint Planning, Stakeholder Management, Requirements Gathering
Soft Skills	Executive Communication, Data Storytelling, Cross-functional Leadership, Feedback-Driven Iteration, Mentoring Junior Analysts

PROFESSIONAL EXPERIENCE

Senior Data Analyst – BI & Analytics

Team Computers Pvt Ltd • Sep 2025 – Present

- **Power BI Dashboard Development:** Designed and delivered end-to-end Power BI dashboards and reports — including Power BI Mobile implementations — incorporating AI-powered smart narratives and automated summary generation, reducing manual analytical effort by ~25% and accelerating executive reporting turnaround.
- **Data Quality & Dashboard UX:** Investigated data discrepancies, anomalies, and inconsistencies across reports — identified root causes, collaborated with stakeholders to resolve data quality issues, and iteratively refined DAX logic and dashboard UX, cutting revision cycles by ~30%.
- **Advanced Data Modelling:** Architected Star Schema and composite data models on 15M+ row datasets supporting 150+ business users — applying Medallion architecture (Bronze/Silver/Gold) for scalable, governed data layers with robust data quality checks and validation controls.
- **Figma & Dashboard Prototyping:** Created dashboard wireframes and design prototypes using Figma to align UI/UX with business stakeholders before development — collaborated with Finance and Operations leadership to define and implement KPI frameworks, enabling self-serve analytics across business units.
- **Performance Optimisation:** Applied incremental refresh, query folding, aggregation tables, and DAX best practices — reducing report refresh time by 40% and improving dashboard responsiveness by 35%.
- **ETL & Pipeline Management:** Designed and maintained end-to-end data pipelines with gateway configuration, deployment pipelines, and scheduled refresh — ensuring data accuracy, integrity, and 99%+ pipeline reliability.
- **AI Narrative Insights:** Developed AI-based narrative summaries and insight generation using Generative AI tools (Copilot, ChatGPT) — helping business users interpret dashboard outputs effectively and enabling C-suite and Director-level stakeholders to act on data-driven findings.
- **Documentation & Governance:** Documented data logic, metric definitions, assumptions, and transformation rules across all reporting solutions — establishing analytics standards and governance frameworks to ensure transparency, consistency, and team delivery quality.

Data Analyst – Analytics & Business Intelligence

AkzoNobel India Limited • May 2022 – Jul 2025

- **Sales Analytics & Forecasting:** Developed Python-based analytical models for sales trend forecasting and performance tracking — delivering forward-looking insights to Finance and Sales Directors to enable proactive strategy adjustments.
- **Data Discrepancy Investigation:** Systematically investigated data discrepancies, anomalies, and reporting inconsistencies across dashboards — identified root causes through statistical analysis and query validation, collaborating with stakeholders to resolve issues before full report rollout.
- **Advanced SQL & Database Optimisation:** Engineered complex SQL queries using CTEs, window functions, and stored procedures on Snowflake (20M+ records) — optimised query performance by 35–40% through indexing strategies, query plan analysis, and ongoing performance monitoring aligned with database administration best practices.
- **Analytical Reporting & Documentation:** Prepared analytical reports, insight summaries, and solution documentation — enriched with domain expertise and structured for senior leadership consumption, supporting data-driven decision-making across Finance and Sales functions.
- **ETL Automation & Data Pipeline:** Automated multi-step ETL workflows using Power Automate, ADF-style pipelines, and VBA macros — eliminating ~20 hrs/week of manual data processing (60% effort reduction), improving data freshness, and ensuring consistent data quality outputs.
- **Data Quality & Governance:** Implemented data quality checks, validation rules, and metadata management practices — alongside RLS and RBAC controls ensuring compliant, auditable data delivery aligned with GDPR-aware design.
- **Report Performance & Scalability:** Designed and continuously evaluated Power BI environments for performance, usability, and scalability — deploying governed data models, certified datasets, and RLS to enable 100+ non-technical users to independently access trusted, accurate data.
- **Cross-regional KPI Reporting:** Delivered structured KPI dashboards enabling cross-regional sales visibility and performance tracking — directly informing distribution strategy decisions across APAC and EMEA regions.

Data Analyst

HCL Technologies Ltd • Aug 2019 – May 2022

- **Exploratory Data Analysis (EDA):** Conducted comprehensive EDA using Python (Pandas, Matplotlib, Seaborn) and SQL to uncover patterns, outliers, and trends — forming the analytical foundation for client-facing dashboard and reporting solutions.
- **Multi-domain BI Delivery:** Developed interactive Power BI dashboards, Tableau reports, and Excel-based analytical models for enterprise clients across Finance, Retail, and Manufacturing domains.
- **Stakeholder Requirement Gathering:** Led structured requirement workshops with global cross-functional stakeholders — translated ambiguous business needs into precise data specifications using user story and use-case documentation frameworks.

- **Statistical Analysis & Reporting:** Applied regression analysis, variance analysis, and cohort analysis techniques to produce statistically robust insights — improving decision confidence for client leadership teams.
- **Power Platform Automation:** Developed VBA-based automation solutions and Power Automate workflows to streamline data processing, automate recurring reporting tasks, and reduce manual intervention — improving accuracy, reducing turnaround time, and enhancing overall workflow efficiency.
- **Process Improvement & Documentation:** Standardised analytics processes and technical documentation across teams — built reusable templates, DAX libraries, and SQL snippet repositories to accelerate future delivery.

KEY PROJECTS & BUSINESS IMPACT

◆ **Enterprise Power BI Platform — AI Insights & Advanced Data Modelling** | ↑40% refresh performance | 150+ users enabled | 99%+ pipeline uptime

Delivered end-to-end Power BI platform (20M+ records, Snowflake) with advanced DAX measures, Star Schema data modelling, and AI-powered narrative summaries. Implemented Power BI Mobile dashboards, incremental refresh, query folding, and data governance standards. Deployed RLS, RBAC, and certified datasets — serving 150+ users with 40% faster report performance and 99%+ pipeline uptime.

◆ **Sales Forecasting & Performance Analytics Model** | Sales trend visibility | Strategic decisions influenced

Developed analytical models in Python to forecast regional sales performance and identify at-risk accounts. Integrated outputs into Power BI dashboards — enabling Sales Directors to track trends and make data-driven quarterly strategy decisions.

◆ **ETL Automation & Process Digitalization Initiative** | ↓60% manual effort | ~20 hrs/week recovered | Org-wide rollout

Identified manual reporting bottleneck, designed and validated an automated ETL pipeline using Power Automate. Conducted A/B test comparing manual vs. automated output quality — validated 99%+ accuracy with zero manual intervention. Developed business case and presented to leadership, leading to full org-wide adoption.

◆ **Dashboard Design, Data Quality & Governance Program** | 100+ non-technical users empowered | ↓50% ad-hoc report requests

Designed visually intuitive Power BI dashboards with certified datasets, governed data models, and row-level security — documented metric definitions, transformation rules, and data logic for full transparency. Investigated and resolved data quality issues across reports, reducing anomalies and cutting ad-hoc analyst requests by 50%.

ADDITIONAL COMPETENCIES

- ✦ Power BI Mobile Implementation
- ✦ Advanced DAX | Time Intelligence | Complex Measures
- ✦ Data Quality Investigation & Root Cause Analysis
- ✦ Generative AI Tools | Prompt Engineering | Productivity
- ✦ Report Performance Optimisation | Scalability Evaluation
- ✦ Cross-functional Collaboration | Stakeholder Communication
- ✦ Figma | Dashboard Wireframing & Prototyping
- ✦ AI Narrative Summaries | Copilot | Automated Insights
- ✦ Schema Design | Star Schema | Table Relationships
- ✦ Metric Documentation | Transformation Rule Governance
- ✦ Data Warehousing Concepts | Medallion Architecture
- ✦ PostgreSQL / MySQL | Window Functions | Stored Procs

EDUCATION

Bachelor of Computer Applications (BCA) — Chaudhary Charan Singh University, Meerut
