Professional Summary

Python Developer with 1+ year of hands-on experience building AI-powered applications using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and Generative AI. Proven expertise in designing scalable backend systems for intelligent document retrieval, transcript extraction, summarization, and conversational AI platforms. Proficient in Python, Django, LangChain, LangGraph, and OpenAI APIs, with a track record of delivering end-to-end AI solutions in fast-paced environments.

Experience

Python Developer 2024 – 2025
SynapseIndia *Noida, India*

- Designed and developed RAG-based AI applications using LLaMA models, LangChain, LlamaIndex, and OpenAI APIs, enabling intelligent document retrieval over large repositories.
- Built and maintained RESTful APIs using Django and Django REST Framework to serve AI features to frontend clients at scale.
- Integrated Azure OCR and Document Parsing for automated text extraction from structured and unstructured documents.
- Implemented semantic search pipelines using Sentence Transformers and vector databases, significantly improving query accuracy and response relevance.
- Leveraged Redis and PostgreSQL for caching and persistent storage in high-throughput AI workflows; used JWT authentication for secure API access.
- Collaborated with React.js frontend teams to deliver full-stack AI features including chat UIs, file upload handling, and markdown rendering.

Projects

ArchivAI Smart Bot | *Python, Django, LangChain, LlamaIndex, LLaMA, RAG, PostgreSQL, Redis, React.js*

- Built a Retrieval-Augmented Generation (RAG) system enabling users to query large document repositories and receive context-aware, accurate responses using LLaMA-based LLMs.
- Integrated Azure OCR and document parsing for ingestion of diverse file types; used Sentence Transformers for embedding generation and semantic retrieval.
- Secured the platform with JWT authentication; used Redis for response caching and PostgreSQL for persistent document and session storage.
- Developed a responsive React.js chat UI with file upload handling and markdown rendering for an intuitive user experience.

Aware.ai | *Python, Django, LangGraph, LangChain, ChromaDB, YouTube API, OpenAI, Celery, React.js*

- Developed a web platform that automatically extracts and stores transcripts from U.S. mayor and city council YouTube meeting videos using the YouTube Data API.
- Implemented LLM-powered summarization and a RAG-based conversational interface (using ChromaDB vector database and Sentence Transformers) allowing users to chat with meeting history.
- Used Celery and Redis for asynchronous transcript processing tasks; built user profile dashboards with transcript viewer and chat interface in React.js with Material UI.
- Applied prompt engineering and semantic search techniques to ensure precise, hallucination-reduced responses from the OpenAI-backed LLM pipeline.

Education

GLA University Mathura, India
B.Tech in Computer Science *CGPA: 8.11*

Mata Kasturi Devi Public School Delhi, India
Intermediate (Class XII) *89%*

Technical Skills

Languages & Frameworks: Python, Django, Flask, FastAPI, JavaScript, HTML, React.js
AI / ML: LLMs, RAG Architecture, LLaMA Models, LangChain, LangGraph, LlamaIndex, Generative AI, NLP, Machine Learning, OpenAI API, Conversational AI & Chatbot Development
Libraries & Tools: Sentence Transformers, NumPy, Keras, TensorFlow, scikit-learn, OpenCV, BeautifulSoup
Databases & Search: PostgreSQL, Redis, ChromaDB, Elasticsearch
Other: REST APIs, JWT Authentication, Azure OCR, Celery, Tailwind CSS, Prompt Engineering, Semantic Search
