Pravendra chauhan

AI ML Engineer Data Scientist

2 Years 0 Month | (+91) 6395663896 | lavishchauhan1995@gmail.com

Key skills

- Artificial Intelligence
- Machine Learning
- Deep Learning
- LLM
- generative ai
- Langchain
- NLP
- Annotation
- Huggingface
- Python
- Django
- MongoDB Atlas
- MySQL
- SQL
- Yolov11
- Segmentation
- Opencv
- Llama3.2
- Numpy
- Pandas
- Tensorflow
- Pytorch
- Scikit-learn
- Fast api
- AWS Cloud
- Deepseek
- Agents
- ChatGpt

Personal Information

City	**Noida**
Country	**INDIA**

Languages

- English

Social links

Profile Summary

Experienced Artificial intelligence and Machine learning with expertise in Python Data Scientist and also Django Rest API,Deep learning, Annotations, Object detection,RAG LLM, Langchain, Llama3, Yolov8,. Seeking a challenging opportunity to leverage my skills and expand my knowledge in a dynamic environment.

Education

B.Tech/B.E., 2022

AKTU Lucknow

Work Experience

Jun 2023 - Oct 2024

AI ML Engineer Data Scientist

Chetu

Expertise in Artificial Intelligence, Machine Learning, and Deep Learning, with hands-on experience in LLMs (e.g., LangChain, Llama 3). YOLOv11,SAM,Object detection, Django Api,fastapi,Mongodb atlas.

Dec 2024 - Present

AI GenAI Engineer

Cogniforge technologies

Internship

6 Months

Stock price prediction, object detection,House price prediction

Chetu

Projects

4 Months

Build a RAG chatbot using openai with LANGCHAIN framework on educational data

Built a RAG (Retrieval-Augmented Generation) chatbot using OpenAI and LangChain for educational content delivery. Played a key role in database

https://www.linkedin.com/in/pravendra-chauhan-27233821b?utm_source=share&utm_campaign=share_via&utm_content=profile&utm_medium=android_app

design, coding, and deploying advanced NLP and deep learning techniques. Gained hands-on experience collaborating with clients to ensure the solution met their requirements, delivering a scalable and efficient chatbot for real-world educational use cases.

4 Months

Horse Balance Analysis Using YOLOv8, Segmentation, and Keypoint Annotations with Roboflow

Developed a computer vision application for a USA-based client to evaluate horse balance using keypoint annotations in YOLOv8, segmentation, and Roboflow. The project employed deep learning techniques to detect and analyze specific anatomical points on horses from uploaded images, enabling an accurate assessment of balance. By integrating object detection, segmentation, and keypoint tracking algorithms, the solution provided precise results, optimizing equine analysis for veterinary and sports applications

4 Months

Online summary generate in Deep learning of DSM-5 Mantle health pitent, generated a summary report

Developed an online summary generation system for DSM-5 mental health patients using GPT-4. The system leverages a question-answering model to generate concise and accurate summary reports based on patient data. This project, focused on the healthcare domain, showcases expertise in applying advanced deep learning techniques for sensitive and critical applications, ensuring precision and reliability in mental health assessments.

6 Months

Real-Time Face Recognition Attendance System for Amazon Store (CCTV Integration)

Developed a real-time face recognition system integrated with CCTV cameras for an Amazon retail store to automate employee attendance and detect unauthorized individuals. The system uses YOLOv11 for high-accuracy person and face detection in live video streams, and FCENet for reliable face recognition against a registered employee database. Built using the Flask framework, the backend handles secure data processing, face matching, attendance logging, and real-time alerts for unknown individuals.
