PRIYANSH KURMI

+91-7318019209 | priyanshpatel360@gmail.com | LinkedIn

Education

Indian Institute of Technology (IIT), Kanpur | 2021 | 7.2/10
Dual Degree in Electrical Engineering

Technical Expertise

Languages & Databases: Python, SQL, PySpark, MySQL, PostgreSQL, MongoDB, Snowflake, Delta Lake
Big Data: Apache Spark, Kafka, Databricks, Airflow, NiFi
Cloud : AWS (S3, EC2, Glue, Lambda, EMR, Athena, Redshift, SNS), Azure (ADLS, ADF, Databricks)
Data Engineering: ETL/ELT, Data Warehousing, Lakehouse Architecture, Star Schema Modelling, Data Archival, Data Migration, Query Optimization
Governance & Compliance: PII Masking, RBAC, GDPR, DPDPA, AWS Secrets Manager

Professional Experience

Data Engineer | SMTS - Oracle | Bengaluru | Mar, 2025 – Apr, 2026

- Eliminated a daily full-load bottleneck on an OAC fact table by enabling incremental FDR via a surrogate summary source, redesigned ETL transformation logic to bypass hard-delete constraints, reducing pipeline runtime by 90%
- Collaborated on designing and implementing a star schema data model from scratch for Oracle Transportation Management (OTM) on Oracle ADW, built 5 fact tables and 35 dimension tables covering end-to-end stages from requirement analysis to testing, supporting millions of rows per fact table.

Data Product Engineer, Nuclei | Bengaluru | Jan, 2023 – Mar, 2025

- Refactored 25+ unversioned cron-based reporting scripts into a modular Python framework with centralized logging and access controls, orchestrated via Apache Airflow, achieving 100% DAG visibility and reducing undetected failures from days to minutes via centralized alerting.
- Implemented a PII data masking framework for MySQL protecting 1M+ user records, enforced role-based masked views with granular RBAC, AES encryption via AWS Secrets Manager, and CloudWatch audit logging to achieve GDPR and DPDPA compliance.
- Configured AWS DMS and Kinesis Firehose to automate data archival from a production database processing 1M+ daily transactions, streamed historical records into partitioned S3 Parquet, cutting hot-tier storage costs by 40% and p95 query time by 30%.

Data Analyst, Nuclei | Bengaluru | Aug, 2021 – Dec, 2022

- Diagnosed recharge failure root causes across plan, circle, and operator mismatches; defined vendor API integration strategy and coordinated with downstream vendors and developers, lifting transaction success rate to 99.5% and reducing churn by 40%.
- Optimized 50+ slow MySQL queries across millions-of-rows tables by adding targeted indexes, rewriting correlated subqueries, and eliminating redundant joins, reduced runtime from 1–2 hours to under 5 minutes and automated secure report delivery to external clients via Apache NiFi and SFTP.

Project

Production-Grade Data Pipeline for Incentive Program | *PySpark, AWS S3 (boto3), SparkSQL, Data Mart*

- Implemented a scalable production-grade data pipeline to read, validate, and transform sales data from S3 for daily and monthly reporting. Data processed for business incentives based on customer spending.
- Integrated PySpark for transformations and pushed processed data to a data mart for reporting, ensuring secure data handling through encryption, decryption, and logging.

ETL Pipeline for Large-Scale Product Performance Analysis | PySpark, Databricks, AWS S3, SparkSQL

- Built a PySpark ETL pipeline on Databricks ingesting multi-format data (CSV + Parquet) from AWS S3; applied broadcast joins, window functions, and partition/bucketing strategies to transform and aggregate product performance metrics, reducing query response time by 40%.
