Deepak Parihar

Python AI Developer

pro.deepak.parihar@gmail.com— +91 8830337191 — linkedin.com/in/parihardeepak

PROFESSIONAL SUMMARY

Software Engineer with experience in Python backend development, Data Science, and Generative AI backed by 2.4+ years of experience in enterprise-scale solutions. Skilled in developing end-to-end AI model products with Python back-end integration. Have experience in deploying applications through CI/CD pipelines using Azure Web Apps. Proficient in Azure AI services for enhanced system capabilities.

PROFESSIONAL EXPERIENCE

Blenheim Chalcot **July 2023 – Nov 2025**
Associate Software Engineer *Mumbai, India*

- Developed an internal career advancement platform with PostgreSQL and SQLAlchemy ORM, implementing RESTful API endpoints via FastAPI with role-based access control, improving review efficiency by 40%.
- Created an ML-based & AI-based recommendation system for career goals with 80% relevance accuracy, successfully deployed to 100+ employees.
- Built a Microsoft Teams recruitment bot using Python and MS SQL Server, integrating with Greenhouse ATS via FastAPI endpoints and implementing LangChain for LLM-powered resume analysis.
- Reduced resume screening time by 50% through AI-powered text analysis, processing 500+ resumes with 95% data extraction accuracy.
- Developed ML & AI models for loan risk assessment and offer personalization using scikit-learn and Azure OpenAI, achieving 82% prediction accuracy and reducing default rates by 15%.
- Engineered an AI meeting assistant using OpenAI and Azure OpenAI LLMs with FastAPI endpoints and asynchronous processing via Redis, reducing documentation effort by 60% with 85% summarization accuracy.
- Built a document processing platform utilizing LangChain with RAG architecture and OpenAI GPT models, enabling real-time querying of unstructured documents with successful deployment handling over 100 documents.
- Designed and optimized database schemas across PostgreSQL, MS SQL Server, and SQLite for various AI/ML applications.

TECHNICAL EXPERTISE

- **Programming Languages:** Python, SQL, JavaScript (Basic), HTML, CSS
- **Web Development:** FastAPI, Flask, RESTful API design, API Gateway, Swagger
- **Generative AI:** LangChain framework, Prompt Engineering, OpenAI GPT models, Large Language Models, Diffusion Models
- **Machine Learning:** Supervised Learning, Unsupervised Learning, Model Evaluation, Cross-Validation, Feature Engineering, scikit-learn
- **Data Science:** NumPy, Pandas, Data Preprocessing, Data Visualization, Statistical Analysis, EDA
- **Visualization:** Matplotlib, Seaborn, Plotly, Dashboard Creation
- **Databases:** PostgreSQL, MS SQL Server, SQLite, SQLAlchemy ORM, Database Modeling
- **Cloud Technologies:** Azure AI Services, Azure Web Apps
- **Microsoft Technologies:** Microsoft Bot Framework, Power Apps, Power Automate, Power Virtual Agents (Copilot Studio)
- **Version Control & Documentation:** Git, GitHub, Markdown, Confluence
- **DevOps:** Docker, CI/CD Pipelines, Deployment Automation

FEATURED PROJECTS

CARA - Career Advancement and Review Application

- **Primary Goal:** Contributed to an internal career advancement platform that enables employees to track professional goals with management review capabilities.
- **Tools & Techniques:** PostgreSQL, SQLAlchemy ORM, FastAPI, Python, GenAI
- **Solution:** Designed database schema using PostgreSQL and implemented with SQL Alchemy ORM, developed RESTful API endpoints with FastAPI for employee data and goal tracking, implemented role-based access control and authentication, created ML-based recommendation system to suggest appropriate goals based on employee level.

- **Result:** Improved performance review efficiency by 40%, developed an AI recommendation engine with 80% objective relevance precision, successfully deployed to an initial department of 100+ employees.

HR Automation Bot for Recruitment

- **Primary Goal:** Built a Microsoft Teams bot to support HR recruitment processes from job description creation to automated resume screening.
- **Tools & Techniques:** Python, MS SQL Server, FastAPI, Microsoft Bot Framework, NLP, GenAI-LangChain
- **Solution:** Developed backend services using Python and MS SQL Server, created FastAPI endpoints to integrate with Greenhouse ATS, implemented LangChain framework to connect with LLMs for resume analysis, built document processing pipeline to extract structured data from resumes.
- **Result:** Reduced initial resume screening time by 35%, improved candidate-job matching through AI-powered text analysis, successfully processed over 500 resumes with 85% data extraction accuracy.

Oakbrook - Consumer Loan Risk Assessment & Personalization Engine

- **Primary Goal:** Developed an end-to-end analytics platform to assess loan eligibility, predict repayment behavior, and personalize loan offers for consumers.
- **Tools & Techniques:** Python, Pandas, NumPy, Data Analysis, Matplotlib, scikit-learn, Azure OpenAI, Banking APIs
- **Solution:** Integrated data from credit bureaus and internal transaction histories to build comprehensive customer profiles. Engineered over 50 features, including spending patterns, income stability, and credit utilization. Deployed machine learning models to predict loan approval probabilities and repayment risks. Implemented a personalization layer to tailor loan offers based on individual financial profiles.
- **Result:** Achieved 82% accuracy in loan approval predictions, reduced default rates by 15% through personalized risk assessments, and improved customer satisfaction scores by 20%. The platform now supports real-time loan decisioning.

CallAI - Meeting Summarization Assistant

- **Primary Goal:** Built an AI-powered assistant to extract call transcripts, generate meeting summaries, action points, and next steps.
- **Tools & Techniques:** OpenAI API, Azure OpenAI, FastAPI, MS SQL, Redis, Python
- **Solution:** Developed document summarization pipelines using OpenAI and Azure OpenAI LLMs, implemented endpoint orchestration with FastAPI, managed document storage with PostgreSQL, created backend workflow using Celery and Redis for asynchronous tasks.
- **Result:** Reduced manual meeting documentation efforts by 60%, summarized over 200 calls during pilot with accuracy of 85%, and enabled seamless Slack integration.

QuickAction - Document Understanding and Report Generator

- **Primary Goal:** Developed an AI-powered platform that ingests PDF and Word documents to generate comprehensive reports and facilitates real-time querying of document content.
- **Tools & Techniques:** LangChain, OpenAI GPT, RAG, PyMuPDF, python-docx, Azure Web App
- **Solution:** Integrated LangChain with OpenAI GPT models to implement a RAG pipeline, enabling the system to retrieve relevant document sections and generate detailed summaries. Utilized PyMuPDF and python-docx to parse PDF and Word documents, respectively. Deployed the solution on Azure Web App, providing a scalable and secure platform for users.
- **Result:** Enabled the generation of comprehensive reports from input documents and facilitated real-time querying of document content, streamlining information retrieval processes.

EDUCATION

Bharati Vidyapeeth College of Engineering **2018 - 2022**
B.Tech. E & TC Engineering — CGPA: 9.2/10 *Pune, India*
Matrix Academy Jr College **2015 - 2017**
Higher Secondary Education *Maharashtra, India*

CERTIFICATIONS

- **Data Science** - Upgrad (2022)
- **Building And Evaluating Advance RAG** - RedTeams

LANGUAGES

- **English:** Professional working proficiency
- **Hindi:** Native proficiency
