Summary

Data-driven engineer with a strong background in data analysis, skilled in collecting, organizing, and analyzing data sets with meticulous attention to detail and accuracy, transforming raw data into actionable insights.

Academic Qualifications

Institute	Degree/Certificate	CPI/%	Year
Indian Institute of Technology, Kanpur	B.Tech (MSE)	8.3/10	2022
LBS Senior Secondary School, New Delhi	CBSE (Class 12)	93.4%	2018
Tagore International School, New Delhi	CBSE (Class 10)	10/10	2016

Work Experience

Assistant Manager - Protean eGov Technologies Ltd. (Pune) (*August 2023 - Present*)

Data Engineering & Automation

- Built and orchestrated an **EL data pipeline using Airbyte** to replicate operational data from **MySQL** to **ClickHouse**, enabling scalable analytics and improving query performance for downstream reporting and dashboarding.
- Built a serverless reporting pipeline using **AWS Lambda (Python)** to transform JSON data from **Amazon S3** into CSV reports, package them into **password-protected ZIP archives**, and distribute them via **SMTP**, scheduled through **Amazon CloudWatch**.
- Engineered an **end-to-end automation system** in Python using **IBM DB2** for generating Missing Credit Reports for entities such as **PFRDA** and Nodal Offices, saving approximately **3 months of manual effort annually**.

Business Intelligence & Analytics

- Developed an **enterprise-level Power BI analytics dashboard** integrating data across multiple business units to deliver executive KPIs and performance insights, enabling data-driven strategic decision-making.
- Developed and implemented a **Power Automate flow** to extract volume data from a **Power BI semantic model** on a daily basis.
- Studied and translated the **CKYCRR Schema 2.0** data structure into an analytics model by defining table cardinality and join relationships to develop ∼ **40 MIS and regulatory reports in Zoho Analytics** for **CERSAI and RE users**.

AI & Machine Learning Applications

- Developed a **PAN OCR solution** leveraging **pytesseract** and **Google Cloud Vision**, deployed through a user-friendly web application using **Streamlit** to enhance document processing capabilities.
- Built an **Agentic AI chatbot** using **GCP Agent Builder** integrated with **Cloud Run APIs**, enabling natural language querying of MD Dashboard structured datasets.

Received a **Digital Excellence Award** for Outstanding Performance from the **CEO** of the company

Analyst - Teachmint Technologies Private Limited (Bengaluru) (*July 2022 - August 2023*)

Utilized **SQL, Python, Power BI, Google Data Studio, and Advanced Excel** to structure and transform data into actionable insights, enabling data-driven decision-making and enable internal stakeholders to drive business strategy and foster growth

Key Contributions:

For Marketing Team

- Developed **Performance Marketing** Dashboards resulting in ∼**20%** improvement in **CAC** and 2.5X growth in Lead qualification
- **Optimized** campaign spending by identifying **hotspots** for high-quality leads including specific locations and particular campaigns

For Sales Team

- Utilized **Predictive analysis** to forecast conversions with **90%** accuracy rate, enabling proactive strategy deployment to meet targets
- Designed and developed an automation solution for daily mailers to stakeholders to evaluate **performance** and create effective **action plans**, resulting in a reduction of 2 hours in Turnaround Time (TAT) on a daily basis

For Executive Leadership

- Built an Executive-level dashboard in **Power BI**, enabling **Self-serve Analytics** for founders and gain comprehensive insights
- Established a **two-way visibility** system for **120+** Channel Partners and Internal Stakeholders utilizing **Looker Studio** to track lead activities, analyze funnel movement, payout metrics and activation metrics of all Channel Partners

Internships

1) Tata Steel - Inspire Internship (*Secured a pre-placement Offer (PPO) from the company) (*June 2021 - Aug 2021*)

Objective	• Reduce **Silicon Standard Deviation in hot metal** in G-blast furnace of Jamshedpur plant
Strategy	• **Pandas and Seaborn** were used in Python to analyze, visualize the data and identify parameters affecting Si content • Compared **the best 5 and worst 5 days** in terms of Si Standard Deviation to give actionable recommendations
Impact	• Was able to predict Si content with **80%** accuracy using **Random Forest Regressor** after hyperparameter tuning • Recommended **tolerance range** for the 10 variables identified to keep Si Standard Deviation in check

Projects

Facial Expression Recognition(FER) - SNT Council IITK (*May 2020 - July 2020*)

- **Spearheaded** a team of 6 to build a **CNN model** to identify Seven Human Emotions using facial expressions
- Tuning of various hyperparameters and other preprocessing steps were done and ten-fold validation applied to achieve high accuracy
- Model was trained on **JAFFE and CK+ datasets** and an average **accuracy of about 92%** was achieved
- Finally deployed the model in a **realtime environment**, that streamed frames from the camera using **opencv**

Technical Skills

PROGRAMMING:	Python, SQL
DATA & ML LIBRARIES:	Pandas, NumPy, Keras, OpenCV, PyTesseract, EasyOCR
DATA ENGINEERING & DATABASES:	Airbyte, Firebase (Firestore, Realtime DB), DBeaver, PgAdmin
BI, AUTOMATION & CLOUD:	Power BI, Zoho Analytics, Looker Studio, Power Automate, AWS
